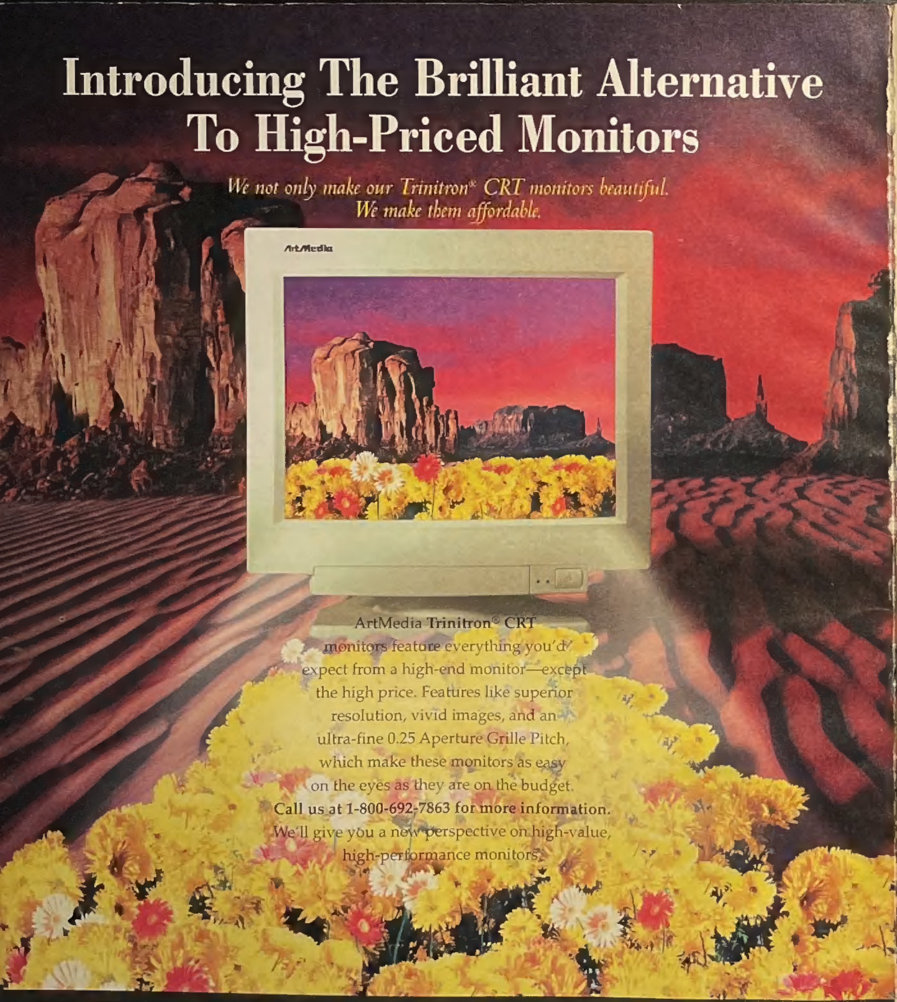
WRITERS' SOAPBOX AWARDS

Introducing The Brilliant Alternative To High-Priced Monitors

We not only make our Trinitron® CRT monitors beautiful.
We make them affordable.



ArtMedia Trinitron® CRT monitors feature everything you'd expect from a high-end monitor—except the high price. Features like superior resolution, vivid images, and an ultra-fine 0.25 Aperture Grille Pitch, which make these monitors as easy on the eyes as they are on the budget. **Call us at 1-800-692-7863 for more information.** We'll give you a new perspective on high-value, high-performance monitors.

TOP 10

Trinitron® is the trademark of Sony Corporation

The New Vision In Monitor Value.

Sizes range from 15"- 20"
Made in Japan

EO75

EO SERIES

200
MEGAHERTZ

EO75
- 0.26mm dot pitch
- 95KHz f_H max
- 1600x1200 @ 75Hz max

$722**

With its super-high 200MHz video dot clock, 95KHz horizontal frequency and an ultra-fine 0.26mm dot pitch, the EO75 from Princeton Graphic Systems® is one mega performer. This 17" (15.8" viewable) monitor delivers a bold, flicker-free resolution of 1600x1200 @ 75Hz. Furthermore, our engineers added Enhanced Imaging Circuitry for a sharper focus without the moiré problems so common to other 0.26mm monitors.

The EO75 is the latest in a full line of new Princeton Graphic Systems monitors. This next generation of EO monitors incorporates PreVu™ controls and Coloright™ technology perfect for intense, graphical applications. In addition, Princeton offers a full three year 'Bucket to Bezel' limited warranty.*

With its power, speed and assurance, the EO series is Mega Perfection.

Acer

THE DIFFERENCE IS CRYSTAL CLEAR

Every day, there are 10,000 contented new AcerView monitor users. Monitors from Acer, the 2nd largest monitor manufacturer in the world, with more than 4 million units sold in 1995. For you, that volume translates into innovative features, a broad product line and an extremely competitive advantage.

Friendly iScreen® Technology

intelligence on screen

This technology lets you adjust all image parameters using interactive on-screen menus.

Advanced Plug & Play Compatability

Monitors can automatically identify and adapt to the attached computer settings, providing users with a remarkable display performance for any given monitor-system combination.

Superior Image Fidelity

Incredible Power Saving

Green Commitment

1996 Writers' [illegible]

Once again, our contributors hold forth on the products [illegible] and industry trends they've loved [illegible] loved to hate) in the past year

Readers looking for clinical objectivity will be sorely disappointed, but readers seeking to tap the [illegible]riences of [illegible] much like themselves may find some pretty helpful stuff. We hope [illegible], anyway!

The 1996 Writers' Soapbox Awards

Products, Services, And Ideas We Loved (And Loved To Hate)

Every year about this time we invite our writers to hold forth on the best and worst of what they've encountered in the previous year. The results have historically included a fair number of rants, both laudatory and abusive.

This year is no exception. If something wowed one of the writers, they tend not to be shy about saying so. On the other hand, if they were having a Bad Disk Day, woe betide the luckless vendor.

Do not look here for scientific method or rigorous objectivity. Look instead for the real-life experience of people who may be a lot like you in their adventures with the technology we can't live with, or live without!

The Soapbox Awards start on page 20.

Software

Drag and File Gold Desktop. This is the Windows 95 File Manager to get for people who want to quickly rename, copy or move a group of files, filter directory listings by various sort criteria, and manage ZIP archives. The newest version for Windows 95 also includes special icon launch and task bars that provide quick access to programs, URL sites, documents, etc. Drag and View, a companion program, includes viewing filters that allow you display a wide variety of document and graphics formats (Windows 3.1 versions of these programs are also available.)

Drag and File Gold Desktop, Price: $55. Canyon Software, 1537 Fourth St., Ste. 131, San Rafael, CA 94901. (415)453-9779. URL: *http://www.canyonsw.com* .

ClipMate 4.0. ClipMate is a Windows clipboard enhancer. It allows you to create and catalog image and text libraries culled by cutting and copying through the Windows clipboard. Multiple libraries each have their own set of thumbnails, making it easy to page through a large number of captured images or text scraps for the information you want. You can filter captured text to remove CR/LF codes, and the "powerpaste" feature allows you to automatically paste a series of consecutive images [illegible] text snippets into a document.

Clipmate, v4.0, Price: $25.00, THORNSOFT Development, P.O. Box 26263, Rochester, NY 14626. (716)227-6505. URL: *http://www.thornsoft.com* . Available in Windows 95, Windows NT, and Windows 3.x versions.

Netscape Chat (IRC Client). This is a reliable chat client that retains more of the advanced features of an Internet Relay Chat than some of its competitors. You can use it to maintain a server address book, open multiple chat windows, enter command-line IRC parameters, and quickly get information on participants and available conferences. It's available for download, right alongside Netscape Communications' more famous Web browser.

Netscape Chat 2.0, Netscape Communications Corporation, 501 East Middlefield Rd., Mountain View, CA 94043. URL: *http://www.netscape.com*

Norton AntiVirus 2.0 for Windows 95. Symantec's improved version of this antivirus utility scans and cleans your hard disk to get rid of the usual virus nuisances. But more importantly it stops new viruses dead in their tracks before they have a chance to reach your hard drive. The Norton AutoProtect utility intercepts incoming email messages with contaminated Word or Excel file attachments, and it won't let you send one to somebody else, either. The new "Live Update" feature lets you automatically retrieve antivirus updates over the Internet with [illegible] single mouse-click.

Norton Antivirus for Windows 95 v2, Price: $69.95 (Upgrade from previous version, $29.95) Symantec Corporation, 10201 Torre Ave., Cupertino, CA 95014. 1-800-441-7234, (541)334-6054. URL: *http://www.symantec.com* .

News Xpress. This Internet Newsreader is the most convenient Usenet browser for Windows that I've ever tested. It started out as a project by its author for a college class, and has since turned into an underground favorite. News Xpress allows you to log into multiple news servers, keeping track of the subscribed groups for each one. Messages can be sorted by date, author, or thread, there's a built-in JPEG viewer, and built-in support is included for UUencode/Base64 file decoding. News Xpress doesn't support automatic message downloads for offline browsing, but you can create a series of local folders and manually archive the messages you want to save. Best of all, it's free and available from most World Wide Web and FTP sites that feature Internet utilities.

News Xpress 2.0b2, Freeware, W.L. Ken, Ng Rm F, 5/F, Odeon Bldg., 26-28 Shu Kuk St., North Point, Hong Kong, *kenng@HongKong.Super.NET* (Available for download at *http://www.windows95.com* , *http://www.jumbo.com* , and other shareware sites.)

Hurricane 2.0 for Windows 95. Unlike some of the other memory management products released for Windows and Windows 95, this utility from Helix Software actually does improve the performance of Windows 3.x and Windows 95, allowing you to open more programs and increasing performance speed on machines with 4 to 8MB of RAM. It also includes an intelligent RAMdisk and a print spooler.

Hurricane 2.01, Price: $50 (free upgrade available to users of version 1). Helix Software, 47-09 30th St., 3rd Floor, Long Island City, NY 11101. 1-800-451-0551, (718)392-3100; fax: (718)392-4212. URL: *http://www.helixsoftware.com* .

Hardware

WinBook XP5 Pentium Notebook Computer. WinBook continues to manufacture fast, reliable notebook computers that are less expensive than models from name-brand competitors. The WinBook XP5 100MHz unit contains [illegible] fast hard disk and graphic accelerator that actually outperforms other notebooks with a PCI bus and 120MHz CPU. The WinBook keyboard is comfortable, and it lets you choose between Accupoint, trackball, and touchpad pointing devices.

WinBook XP5 Notebook, $2399. WinBook Computer Corporation, 1160 Steelwood Rd., Columbus, OH 43212. 1-800-211-6952.

Quantum XP SCSI Hard Drives. Don't confuse these Quantum drives with the company's EIDE models. These are SCSI Fast and Wide or SCSI UltraWide disks between 2GB and 4GB in size that support burst transfer rates of 15,000 to 20,000 KB/second. They're specifically built to support multimedia streaming, so that you can capture a large video or sound recording to disk without dropout or clipping.

Quantum SCSI Hard Drives, $500-$1000, Quantum Corporation, 500 McCarthy Blvd., Milpitas, CA 95035, 1-800-624-5545, URL: *http://www.quantum.com* .

Iomega 3200 Ditto (Parallel Port Backup Drive). This dependable backup unit backs-up files at between 6000 to 10,000KB/second. (A new software suite from Iomega [illegible] make [illegible] run even faster.) The Ditto drive ships in a lightweight external case that plugs into any parallel port. There's an extension port on the case to keep your printer connected when the drive isn't being used. The software bundled with the Ditto includes backup packages for DOS, Windows 3.x, and Windows 95. This drive is also remarkably compatible with older QIC40 and QIC80 cartridges. I fed it a series of tapes made on an ancient Colorado Jumbo 250 with Central Point Backup, Norton Backup, etc., and it read them all.

Iomega Ditto 3200 Parallel Port Minicartridge Backup Drive, Price $299 (package includes cables, 1 Step Backup for DOS, Win31 [illegible] Win95, 1 tape). Iomega Corporation, 1821 West Iomega Way, Roy, UT 84067. 1-800-697-8833; (801)778-1000. URL: *http://www.iomega.com* .

Computer Pacer

PERFORMANCE Have you looked at your [illegible] Yellow Pages recently? [illegible] not [illegible] as it was 3 [illegible] ago. The recession had a lot to do with it but businesses fail in good times and bad. Why? [illegible] reasons:

- [illegible] money [illegible] the [illegible]
- [illegible] products [illegible] haven't [illegible] up [illegible] technology [illegible]
- Selling products that are of inferior quality.

ASSURANCE **COMMITMENT** You may not have heard of Computer [illegible] USA, but it's been in business for over 8 years – almost half the life of the personal computer industry.

EXCELLENCE Service and reliability are the keys to customer satisfaction. We're here to answer your questions. When you want new products or services, we make sure the products are dependable and powerful. We guarantee good service and deliver a product with a good value, and we don't charge too much.

RELIABILITY Over the years the company has grown but the tradition of service and quality continues. Computer Pacer customers count on it. You can too!

A Christmas Wish

1996 WRITERS' SOAPBOX AWARDS

Laura Bell

In Praise of CompuServe

Several times this past year, other Netters have asked why was I running up charges on expensive CompuServe when I could simply pay a flat fee to an ISP (Internet Service Provider) and save tons?

Newbies to the online world jump at bargain rates from ISPs when they get bitten by the bug to explore. They have been warned that information services exist only as price gougers.

I've retorted, and will continue to do so, "...it's simple; CompuServe has stuff you can't find on the Net."

Online Forums

The Net has Usenet groups for posting, but that is all you get. You don't have the options of chatting in conference rooms, downloading and uploading material specific to the forum, or attending previously scheduled seminars, hosted and attended by some of the most well-known professionals in a variety of fields. All of this is available in one location in CIS's forums.

On the Internet, if you want to go to a chat room, for instance, and discuss writing, you have to leave Usenet and try to log into the #writers room in IRC (Internet Relay Chat).

"...it's simple; CompuServe has stuff you can't find on the Net."

—Laura Bell

Scheduled chats in conference rooms in CIS forums are posted. Users also can enter and page other users who drop in the forum to chat awhile.

Posting messages is quick and easy. There are categories for each forum. Once you post, you can return to the opening menu of the individual forum and see if someone has responded to your post. You will see a "messages waiting" note.

When replying to a post, you can ask the system to put it back up for public viewing, list so only the originator can read it, or send it through CIS mail. (Notice of new email is on your first screen when logging in.)

Forum sysops are helpful folks. If you, as a new user, have posted a topic which they think would be better fitted elsewhere, they will email you and move the message. Also, other users [illegible] also helpful. While trying to get information on a repetitive stress injury, knowing many writers suffer this, I wrote a note in the jforum (journalism forum). Some kind soul wrote back indicating I would have better luck by posting to the lawsig. It was [illegible] forum I hadn't previously come across.

(CompuServe has hundreds of forums. It may be overwhelming to newcomers. It is best to take some time to actually read the manuals they send free of charge when joining.)

Moving Around CIS

Many systems take up your time because of the lags moving around menus and jumping from spot to spot. I find that CIS cuts way down on this problem. In terminal emulation mode, I can log on to the system, check email, go to three or four different forums I like [illegible] check and be off in about three [illegible] four minutes, tops. Sometimes, less than that, depending on the number of messages requiring attention.

If, while online, you desire to see if there is a forum or an [illegible] dedicated to a topic of interest, simply type "find <topic>" and it will let you know if there is a forum. If you aren't specific enough in the search word, it will tell you to ask again. (On the cautionary note, if you don't find it after a couple of tries, either look in the manual or /g feedback and write to customer service and ask. They answer within 24 hours.)

Some forums are of special interest to those in various professions. These forums are the best networking/gossip arenas in the online world.

Mail

On some systems, you have to move to different sections to perform a variety of mail functions. Not so on CIS. It is all in one section. You create your message, and then you tell the system what to do with it.

Options include: regular CIS mail, Internet mail, faxes, a postal letter and Congressional mail. Faxes and Congressional mail have premium charges attached to them, but you do not have to worry about accidentally performing a function which adds to your bill. It will tell you the charge after you key in your request and give you an option to cancel.

For those who like to send long email, you can upload a prepared file (for email) as long as the format is in ASCII. It can be sent out through the Net. I have never had anybody complain about the message being garbled. So if you email a lot of files to business acquaintances, and have a high-speed modem, this function will make you more cost-efficient.

[illegible] Internet

There is [illegible] option to enter the Net at the first menu you see after reading the daily highlights. The Internet is very efficiently organized for those who are new, fairly new, and even us old-timers.

I post in a lot in newsgroups. I can create an article and post to five newsgroups and be off the system in about two minutes. (You can only post in the newsgroups you are subscribed to and only to five groups [illegible] a time. If you want the post in additional groups, you have to repeat the procedure.)

Pricing

As with everything in the online world, pricing structures for information systems seem to be in a constant state of evolution. When the wars between the different services started really heating up [illegible] couple years back, CIS was forced to come down and offer [illegible] typical five free hours a month, if you joined with is the $9.95 a month plan. Hours above that [illegible] the again standard $2.95. (The first month, you get ten free hours.)

There [illegible] premium areas throughout the system. These are all easily notable with [illegible] before the selections. And, as previously mentioned, you will get [illegible] prompt before you hit the final enter key asking if you [illegible] sure.

For an additional $15 a month (a total of $24.95) you are entitled to 20 free hours; every additional hour is then charged at $1.95.

After you sign on and start using up your free hours, you check on how you [illegible] doing by typing "/g bill" or "/g billing" from most parts of the system. If you have chosen the cheaper rate, but find you are using up your free hours faster than contemplated, you can switch over to the more cost-efficient option.

Reaching [illegible]

CIS is currently owned by H&R Block. (It was originally opened in 1969 and acquired by H&R Block in 1980.) Ownership could change in the future. But CIS has been around through all the changes in this and related markets. It seems to be the target of a lot of lawsuits and pesky

continued from page 22

problems, but my bet is that it's going to be hanging in there despite all the changes we've seen and those most likely on the horizon

The customer service number for sign-up help: 1-800-336-6823, and for the regular customer service, call 1-800-848-8900. If the access number they assign you turns out to be a toll call, and you have an account elsewhere, CIS is very telnet-able. In fact, sometimes when I am in a hurry, I telnet from another bbs, just to save on the individual dialing time.

On a personal note, I have been involved with the online world since 1989. I have used it for both profit and personal needs. When I research, start an emailing chain with folks, and need instant answers for my work, nothing has proved more reliable than CIS. I wouldn't want to have to face the world as a writer without it.

Jonathan E.

Emma, Eno, and The Clock Library

A couple of months ago, I saw the latest film version of Jane Austen's *Emma*. Now, I (in common with many others) spend too much of my time already wondering about the effects of the current burst of digital technology into our lives. *Emma* might seem like some relief, but no, it set me off on the trail of the parallels between life in a nineteenth-century English novel, the country society it represents, and this marvel of the modern electronic age, the Web, along with the whole virtual futurist-online-media schmear that we're so constantly hyped on.

BTW, if you're wondering about the film itself, *Emma* is quite delightful, full of humor, both subtle and broad, along with keen observation and wicked demonstration of the foibles of the heart. And, if you're sufficiently curious and just can't bear the thought of dragging the meat down to one of those soon-to-be-antiquated, even extinct, bookstores, you can read the book online at *http://wiretap.spies.com/ftp. items/Library/Classic/emma.ja*

Much of *Emma* is about community, a word much bandied about with reference to the Web and online society. In *Emma*, the community is close-knit, even suffocating, yet with some underlying fractious qualities—and also old-fashioned in the sense that there were clearly understood obligations between its members.

I note three things. First, the Web, along with the rest of contemporary society, is just as fractious as Emma's world, but perhaps, in essence, not a great deal more so, although it may seem so due to today's plainer-speaking and more egalitarian social structure.

Secondly, the community of *Emma* was extremely hard to escape; those obligations bound people together. With the Web, or even in real-life contemporary America, it's remarkably easy to just click or drive yourself away to somewhere else. This type of easy freedom in its earlier forms is partially responsible for today's intense hunger for community.

Third, when I hear the word "community" these days, I want to know who's trying to sell me what. Authentic community cannot be instantaneously fabricated, and tolerance of diversity is a requirement for longevity. Communal activity and some sense of etiquette remain valuable building blocks in construction of anything more than a strip-mall sense of community.

One of the things that struck me about *Emma* was how much communication there was, even in those days before the telegraph. Everyone was always writing letters or popping over to the next manor house to

1996 WRITERS' SOAPBOX AWARDS

exchange "news"—and it was always called "news" even when it was rank gossip. There was an incredible hunger for information. Of course, *Emma* is mostly about the wealthy, leisured classes with time to indulge in such activities. When Emma and Harriet visit the poor, the conversation is restricted to a stilted "Mustn't complain."

Today, especially with the Web but even with only "traditional" media sources, we are inundated with information, yet the hunger for more remains. Or is it really hunger for just the right information? Much of what passes for information [redacted] junk food, rank gossip, utterly useless and unsatisfying, pure time-filler, suitable only for those with [redacted] black hole for an intellect.

Emma took place even before the introduction of the railway—yet, when it comes to human nature, plastic as it is, it seems [redacted] though not much has changed. The film and novel [redacted] both ultimately about emotional involvement, about that most personal and enduring human endeavour of finding a suitable marriage relationship along with its attendant emotional squalls. It's about emotional connection with oneself, a significant other, and community. The choices available to the individual of how to go about this have opened up considerably—but I don't see, with the exception of a few loners and psychopaths, that the desire to do so has changed much at all. The hype about the Web [redacted] that it [redacted] all-new, [redacted] complete break from the past. The reality is that, just like every previous cultural movement, the Web not only relies upon previous accomplishments and trends but is based upon fundamentally cultural human desires.

What has changed is the arena within which we must attempt to make these connections. The railway together with all of its subsequent technologies and economic changes have conspired to make daily life considerably [redacted] fast-paced. It's ironic since, at the same time, these technologies and the economy have generally increased leisure time and material well-being.

However, I sense that we are now at some crux, [redacted] crucial point, where the promises of technology balance precariously against the threats, combined with a few other factors, in a strange three-(or more)-dimensional equation. If this equation is resolved the wrong way, what appear to be fundamental human needs, time, space, and place to pursue these emotional connections, may well be lost. I am convinced that time [redacted] the condition most needed and also the condition so far most damaged by both the digital revolution and other technological and economic factors. The signs are everywhere and I'm far from the only one to have noticed them.

Perhaps it's all just a media-induced pre-millennial cargo-cult of accelerated hopes and expectations. Perhaps the rapid growth of the digital technology business and its time scale [redacted] in fact cancers upon capitalism and we'll eventually have a superior [redacted] yet unknown economic system in its place. (Sure!) Perhaps we really are supposed to live in cyberspace, a self-constructed virtual reality where we'll never get hungry.

However, I doubt it. My meat-based gut tells [redacted] that I, at least, need time and space and a place to be—and I know that I don't want those conditions dictated by technologists with their fast-paced version of the future, a product business and media seem intent on selling. I want to be able to take long, slow rambling walks without the hurry and bustle, commercialism and plain outright artificiality of the cyber- and business world intruding.

It's obvious from reading the letters pages of various other magazines that there are plenty of others who feel the same way. Thus, it was encouraging as well as ironic to stumble across the first signs of the pendulum swinging back

within the ranks of some of those who have done the most to bring the digital revolution and its churning ravages of time, ■ least conceptually, to such a state of preeminence. (I do not entirely blame them for this—I think other, more commercial, interests took their intellectual curiosity and attempted to make it into a market.)

I first read of Stewart Brand's idea of the Clock Library in Brian Eno's fascinating diary of what 1995 was like for him, *A Year With Swollen Appendices* (published by Faber and Faber, $16.95). The Clock Library is an elaboration of Danny Hillis' "The Millennium Clock," an article in *Wired*'s "Scenarios: the Future of the Future" special issue of 1995. (The irony is almost suffocating, isn't it?) Hillis' basic concept is to design a clock that will last 10,000 years—about as long as we've had techology so far. It's supposed to tick once ■ year, bong once a century, and the cuckoo should come out every millennium.

This is a magnificent idea and it immediately caught the attention of high fliers within those particular intellectual and artistic online circles. Eno called it "The Clock of the Long Now" in recognition of its fundamental aims of encouraging the long view and the taking of long-term responsibility by those who make decisions. After a year of online conversation, a board of heavy hitters had coalesced: Esther Dyson, Doug Carlston, Kevin Kelly, Danny Hillis, Paul Saffo, Mitch Kapor, Peter Schwartz, Eno, and Brand. "People like them are flying very fast and ■ also thinking about having a place to land," ■ Brand puts it in his section of John Brockman's *Digerati*, (Hard Wired, $24.95).

Well, we all owe it to ourselves as well as those around us to have a place ■ land. In this age of memes and concepts, perhaps the Millennium Clock and its attendant library of content for the deep future, "information deemed especially useful over long periods of time, such ■ minding extreme longitudinal scientific studies, or accumulating a 'Responsibility Roster' of policy decisions with long-term consequences," will remain only virtual—but, even if it turns out to be so, ■ an icon to reframe the way we think, according ■ Brand, ■ a usable intellectual antidote to the flurried arrogance of so much of the computer industry, it's already extremely valuable. We can each and every one of us use the idea in our personal lives today.

But who knows? Perhaps it will become actual. Hillis hopes to have the Clock up and running by the time of the next millennium. The design of the project is ongoing but there's already an office, bank account, and the Clock Library has non-profit status. Stay tuned—keep that attention span engaged. Search frequently on the Web. Develop a sense of community that would do Emma proud.

Late Breaking News: As I finished writing the above, Stewart Brand emailed me with some more detailed and current information. "Danny's design of the Clock mechanism is begun and brilliant. We intend to patent several of its elements. It looks like we'll be getting an office in the Presidio in SF to begin funding,

Intel 166 Multimedia

- Pentium® Processor 166MHz by Intel Computer
- Intel Triton, Intel Chipset, PnP, Flash Bios
- 15" 1280x1024 Fast Screen Digital Monitor
- 1.6GB EIDE 11ms Hard Disk Drive
- 16MB EDO RAM, Expandable to 128MB
- 2MB Video Card, PCI Bus MPEG Support
- 3.5 Hi Density Floppy Drive
- 8X SPEED CD-ROM Drive IDE
- 16-Bit Digital Stereo Sound Card
- Mini Tower Case w/230 Watt P/S (Exp. to 7 Drive Bays)
- True Hi-Fi Multimedia Speakers
- 104 Key Windows 95 Keyboard
- Zodiac Ultimate 25 Game Pack
- Eureka III Plus (5 CDs - 1996 Compton's Encyclopedia, Animals, Etc.)
- Super Collection 500 Titles
- 33.6 Fax/Modem w/Voice Mail (w/Internet Kit)
- Optional Touchpad Keyboard Add $60

Intel's P-166 $1375

one-per-customer only

Price Includes Monitor ■ Full Version of Windows 95 CD.

Power ■ Expandability
Powered by Pentium® 166 MHz Upgradable to 200 MHz.

Voice ■ ■ Internet Ready
Internet Free w/EarthLink Trial Membership and Voice Mail System Built In.

Support ■ Service
Free 1-Hour On-Site Service Call with Every ATC System. (Just in Case)

True Color Display
■ Video w/MPEG Will Give ■ 16.7 Million Colors ■ 800x600 Resolution.

Cool Keyboard
Ergo Design ■ Finger-Touch Mouse Pad Design.

Sound System
60 Watts of True Stereo Sound Speakers.

Looking for a Notebook?

One that is Fully Modularized for easier Upgradability and with Great Value? Yeh, why not?

$3195 TFT/Dual Scan $2395

Core Logic Chipset	Intel Mobile Triton, PCI bus	
Memory	8MB	
Memory Upgradable	16, 24, or 40MB (DIMM)	
External Cache Memory	256KB L2 cache memory	
LCD Type	12.1" TFT LCD 800 x 600 SVGA LCD up to 1024x768 linear mode	
Hard Disk Drive	Removable IDE drive with PCI bus controller	
Video Chipset	NEO Magic PCI bus 1MB RAM	
Audio Chipset	ESS 1688 16-bit Stereo Sound Blaster Pro, WSS compatible	
Audio Expansion	3 external jacks for line in & out. Built in speakers & microphone	
CD-ROM	[illegible] 1.44 FDD module and ES 5.25" CD-ROM drive module. Can be replaced by other [illegible] modules. Options: Second battery pack.	
Keyboard	87/88 keys with 101/102 keys emulation. Palm-rest. Support application and Windows keys.	
Pointing Device	Touchpad	
PCMCIA	Cirrus CL-PC6730 PCMCIA [illegible] (PCI bus) 2 type-II/1 type-III [illegible]	
Battery Type	9-cell lithium-ion 3900mah w/ 45wh capacity 3 hrs. for fast charge when off.	
Power Management	APM with S/R button	
I/O Interface	Serial	1 male 9-pin RS 232, 16550 UART
	Parallel	1 female 25-pin ECP EPP bi-directional
	Video	1 female 15-pin connector
	Audio	Mic jack
	Mouse/Keyboard	6-pin PS/2
	Docking Station	240-pin (PCI)
	IR Link	Infrared wireless link, IrDA/II
	Modem	Built-in fax/modem as option
LCD Activity Indicator	Battery gas gauge, CPU mode, HDD, PCMCIA, FDD/CD-ROM, Caps/Num/Scroll/Overlay lock, AC power, battery charging, suspend, brightness, and contrast	
AC Adapter	Universal, 90-264V (4.13" x 2.3" x 0.9")	
Security	Kensington lock	
Environment Control	No painted plastic. No emissions plating coating	
Warranty	1 Year/battery 6 month	
Accessories Included	Carrying case, AC adapter & battery utility software and user's manual	
Weight	6.8 with CD-ROM (6.3 with FDD option)	
Dimensions	11.7" x 8.8" x 1.94"	
Safety Standards	[illegible] Class B, UL, CE II

1997

Once again, we're pleased to bring you our compendium of dealer and service information to help you with all your computer-related shopping needs in 1997.

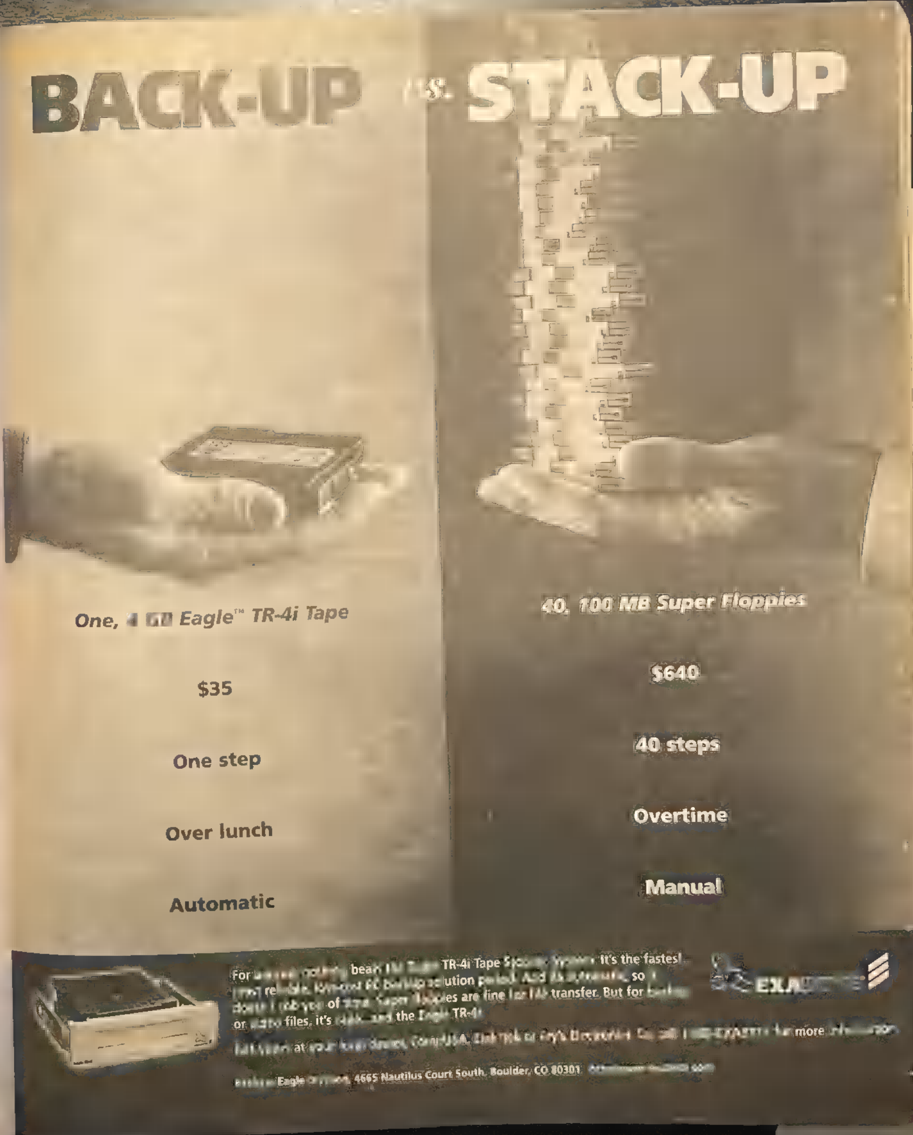
Beginning on page 43, you'll find city-by-city listings of Southern California stores, ISPs, repair establishments, and other useful businesses.

If you're looking for a particular item, it helps to be able to narrow your search to those likely to carry it. For this reason, we also include Specialty listings, starting on page 100, so that when you want a LAN, you don't have to wade through dozens of hopeful purveyors of office supplies to get there.

We hope you find this useful, and welcome your suggestions for future enhancements.

–eds.

Annual Dealer Guide



BACK-UP vs. STACK-UP

One, 4 GB Eagle™ TR-4i Tape

$35

One step

Over lunch

Automatic

40, 100 MB Super Floppies

$640

40 steps

Overtime

Manual

For [illegible] beat the Eagle TR-4i Tape [illegible] System. It's the fastest, most reliable, low-cost PC backup solution period. And it's automatic, so it doesn't rob you of time. Super floppies are fine for file transfer. But for backup or [illegible] files, it's [illegible] and the Eagle TR-4i.

Get yours at your local dealer, CompUSA, [illegible] or Fry's Electronics. Or call 1-800-EXABYTE for more information.

Exabyte Eagle [illegible], 4665 Nautilus Court South, Boulder, CO 80301 [illegible]

U.S. General Services Administration

Introducing The

MicroTimes Quotation Hotline

The Free, Convenient And Easy Way To Receive Pricing Quotations On All Your Computer Needs!

COMPUTER SHOPPING MADE EASY

The MicroTimes Quotation Hotline: It's Free, Easy and Convenient!

Whether you work for a large corporation or are buying for your personal use, the MicroTimes Quotation Hotline can help you gather pricing *__Information Quickly, Easily and for Free__* from a wide variety of computer resellers through the support of *MicroTimes* magazine.

Just fill out the form on the opposite page so you can receive information directly from our advertisers on the exact computer products you are interested in. Our advertisers will respond to your requests directly by fax, phone, mail, or e-mail...whichever way you choose.

To ensure accuracy, please read the following information and instructions:

1. All requests for quotation must use the form attached so that the Optical Reading software (OCR) can read it accurately. Do not send requests for quotation on your own letterhead because the software will not read any other text except for the text areas provided in the form.

2. Please fill in all the information legibly. By filling in the boxes neatly and legibly our OCR software can read your requests for quotation accurately. This will also ensure that your request is easier for advertisers to respond to your needs.

3. Do not cut inside the dotted line.

4. If you are asking for multiple systems and/or computer products in the same category but with different specifications, please use additional forms. This will ensure that your requests for quotation will be responded to accurately and without any confusion from *MicroTimes* advertisers.

5. Be familiar with the particular computer products you are interested in. Be specific about the various products, system processors, speeds, hard drive sizes, features, as well as the particular configuration that you are interested in. This will ensure that you get an accurate response.

When You're Finished, Please Fax The Completed Form To:

1-800-496-8008

To accurately process your quotation request, please print like the example to the right, without touching the box sides. Thank you.

DIRECTIONS. Please Do Not Use A Cover Sheet. Only legible and completed forms can be processed. You may make copies of this form for multiple requests. Copy at 100% of actual size, do not [illegible] in size. When you fax your form(s), you may [illegible] to note that the forms have been placed properly into the fax machine to avoid faxing the form's backsides. Shade or fill in any circles that apply and print neatly within the boxes without touching the box sides.

NETWORK TRAINING
[illegible] CNE [illegible] & [illegible]
"Fundamentals Of Internetworking"
[illegible] about Routers, Bridges, Gateways & Repeaters

Microsoft Certified Systems Engineer - (MCSE)
$3,500.00
- *50 [illegible] Discount on Certification tests.*
- *288 Class Hours*
- *Max. 14 Students [illegible] the class.*
- *Test Taking Techniques*
- *Free Backoffice CD (Includes NT Server software and more)*

- All Microsoft Courses are based on Microsoft's Official Curriculum.

Certified Network Engineer - CNE 3 & 4 (Netware 3.12 [illegible] 4.1)
$3,500.00
- *288 Class Hours.*
- *Free 2 User Software (Netware 3.12 [illegible] 4.1)*
- *Multiple CNE certification (3 [illegible] 4)*
- *Max. 8 students in the class*

- All Novell Courses are based on Novell's Official Curriculum

"Fundamentals Of Internetworking" Course
$950.00
This hands-on course, developed by N.A.C.C - a leader in [illegible] Internetwork field, is designed [illegible] provide networking professionals with comprehensive training in
- *Routers, Bridges, Gateways and Repeaters.*
- *Routing Protocols e.g. TCP/IP & IPX/SPX.*
- *Implementing Routers using Netware and CISCO routers.*
- *Configuring Internetworks using ISDN & Frame Relay.*

Microsoft Individual Courses (Day & Night Classes)
- *Windows NT Workstation / Server 4.0 (#687) (5 Days)*
- *SNA Server 2.11 (#562) (3 Days)*
- *SQL Server 6.5 - System Administration (#756) (5 Days)*

ONE MAN STILL SHAPES EVERY BOARD.

Bruce Jones has been shaping custom surfboards since 1960. His boards became legends, and in 1973 Bruce founded Bruce Jones Surfboards. Then in 1994 he put a full graphic catalog of his boards on an EarthLink website. The rest is history.

"Being on the web changed our business. EarthLink gave the world access to us, and we discovered an international market for our boards that we were never aware of.

"Our site gets at least [illegible] thousand hits a day. Customers send [illegible] and requirements electronically [illegible] making [illegible] the net even [illegible] We [illegible] Japan and other countries [illegible] would have contacted us any other way.

"EarthLink is great! The service has been excellent and the prices competitive. It was no trouble setting up or signing on, and they have special technical support for corporate users."

Corporate Accounts, Dealers, Government and School P.O.'s Welcome

MAXIMUM VALUE

EVERYONE LOVES OUR SYSTEMS

We get awards all the time for our quality and service. That is because we carefully engineer our computers to offer performance and value driven prices. We keep our engineering force on the leading edge of technology, always searching for ways to improve performance and reliability.

Examples of [illegible] skill is the speed with which we evaluate and integrate new technology: from our 12X CD ROMs making full screen video a reality to our EDO Performance Enhanced RAM [illegible] optimize [illegible] systems [illegible] speed. The [illegible] speed advantage [illegible] from using the [illegible] Pentium® Pro CPU with [illegible] 32-bit operating systems. When combined with [illegible] art Matrox MGA millennium with its built workstation performance at a fraction of the [illegible].

With design and engineering like this of course people give us awards, we are proud to display some of our award from prestigious magazines such as PC World, PC Magazine, and PC Computing. It is nice to know your hard work gets recognized by the best in the business.

Forget about hassling with cables, connectors and power supplies. The 4-GB EagleNest™ TR-3 tape storage system lets you share a tape drive among several PCs – at the office or home – by simply plugging the drive into the EagleNest™ interface. It's like a removable cartridge – simple and fast. The [illegible] is just $[illegible] for the drive and your first Nest™. Additional Nests™ for sharing the drive with other PCs are only $[illegible] each.

To get yours, visit your dealer. Or to order direct, call 1-888-NEST-IT today.

T LEVEL OF PERFORMANCE

THE NEW AXIS TERRA XPS SERIES

Powered By Pentium Processors and Fueled By the New SDRAM

"Free Your Processor Power With The New Synchronous Dynamic RAM That Breaks The Bottleneck of Asynchronous EDO Memory."

At Axis, there is something that you won't find at other computer makers. We don't cut cost. [illegible] we use only the [illegible] components [illegible] market, from the system board to the speakers. Our focus is to build a [illegible] of systems that deliver the most performance and most value to any user.

And now our Pentium Terra systems come standard with the fastest memory ever—SDRAM (Synchronous Dynamic RAM), giving the systems another edge over the competition!

If you're looking for a computer maker that will cut all corners to sell you a cheap computer, we suggest you move on to the next page. But if what you want is uncompromising value, we've got the system for you.

PASADENA COMPUTER CENTER

PASADENA IS FAMOUS FOR MORE THAN JUST THE ROSE BOWL.

Committed to Excellence, Free Support.

We are committed to giving you a high quality, reliable system. All systems are assembled by us right here at our headquarters. Quality control is strict, with every system being tested and "burned-in" for 72 hours before delivery. All systems come with a one year carry-in parts and labor warranty, no questions asked. And our service personnel are trained to provide technical support at no charge to you.

Satisfaction guaranteed!

Most of our customers have been with us for a long time. We do all we can to make sure you are happy. If you have a problem with your system, for any reason, we offer a full 1 year warranty covering parts and labor. We also have a GE 3 year additional warranty membership available as an option.

About Pasadena Computer.

Pasadena Computer Center is located in Pasadena, CA with branches in New York. With almost ten years in the industry, Pasadena Computers learned how to serve its customers well. Some of our repeat customers include the Jet Propulsion Laboratories (JPL), GTE, U.S. Postal Service, Rockwell, Pacific Bell, UCLA, USC., Los Angeles Unified School District, Cal Tech, Edwards Air Force Base, Kaiser Permanente and many community colleges. No matter if you're looking for a computer to use at home or a hundred computers for the office, you'll get the quality and service you expect.

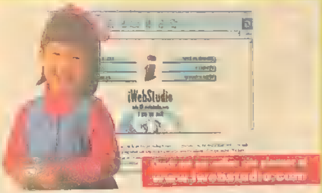
Having your own web site has never been easier or cheaper!



CALL FOR OUR FULL SERVICE WEB SOLUTIONS!

our domain name: www.yourname.com
Virtual hosting with your domain name
Complete 5 Level Visitor Analysis
Free iWebStudio marketing consultation
Free lisitings on 15 major search engines
Access to Web Resources Center

Free iWebStudio Business Newsletter
Suite of Internet Web Site Design Tools
Access Counters to track site visitors
Unlimited updates of Your Site
25MB of web storage
500MB/mo of traffic

WebStudio is the only company that offers complete web package solutions to help businesses succeed on the Internet. Any company can put up a web site and host your site, but only iWebStudio's solutions also help you strategically market and position your web site to reach your target audience including listing your site on 15 of the most popular search engines where 85% of the Internet world will find you. We will help you get your very own domain name (www.yourname.com). And when visitors come into your site, we will tell you exactly who's coming in with upto 5 levels of detail so you can study your visitors. You also get access to a wealth of marketing research at our Web Resources Center and valuable software to let you design your site. If you're a little computer shy, one of our award-winning designers can help you design an amazing site without spending a fortune (see our resume at the side). iWebStudio has won over 30 major awards for design & interactive excellence. You get hosting, your domain name, marketing, software & research all in one complete package.

With a full staff of Internet technicians, web & graphics designers, programmers & Internet marketers, we have the most complete range of services to help your business succeed on the Internet. If your is to succeed and not just be on the Internet, call 1-888-USE-IWEB (873-4932) or visit our web site with our interactive site planner at www.iwebstudio.con today to find out how easy it is to put your business on the Internet.

Looking for a
Career Change?

Are you looking to get into the computer field but lack technical skills?

Do you want to make more money? Then, Envision has the right program for you where you can train part time to be a computer network engineer even if you have no computer experience whatsoever and currently have a job. Once you have passed this program, we will help place you in a job in the computer field where you can gain experience while you work on a MCSE or MCP certification to further develop your skills and increase your income potential.

(see our [illegible] Technical College Ad)

[illegible] FAULT-TOLERANT [illegible]

If your business needs [illegible] fast yet dependable server, look [illegible] further than Envision's line of network serv[illegible]. Envision's se[illegible] are built not only for speed with the latest in technologies like Pentium Pro [illegible] Wide SCSI-3 but also for dependability with ECC (error checking [illegible] correcting) parity memory and Triton II 430HX Pentium or Natoma Pentium Pro Chipsets from Intel, specifically designed for dependable and fault-tolerant network operation. Plus, Envision's servers come with specially-engineered super-cooling power supplies designed to take the loads and rigors of continuous operation. And for the best dependability, ask for Envision's revolutionary redundant power system which contain two hot-swappable power supplies which guarantee you'll always be up because if one power supply should go down, the other one kicks in immediately without disturbing your server

SUPER GRAND OPENING

Computer Fun Starts Here!

If you thought your family couldn't afford to own a computer, think again! Envision has the solutions for your family's computing needs with full-featured Pentium systems starting from just $799! Need portability, check out our new HyperBook portables with new larger color LCD screens. Need a server, check out our Server line.

Intel Pentium/Pentium Pro Power

Envision PCs are powered by Intel Pentium and Pentium Pro technology for super power while maintaining 100% compatibility with your existing PC software.

The Latest Technology Built-In

Don't let the price fool you, every Envision PC is packed with the latest technology available today like Intel Triton 2 Chipsets for 100% compatibility, performance-enhancing Pipeline Burst Cache for the ultimate in performance, advanced 64-bit SVGA Accelerators for amazing graphics, and Enhanced IDE hard drives for fast hard drives to name just a few features.

Amazing 64-bit & 3D Graphics

Envision PCs come with state-of-the-art 64-bit graphics accelerators, designed to make your graphics applications and games really zoom. And for super 3D graphics and special effects, choose Envision's 3D Office Systems with Diamond's award-winning Stealth 3D for advanced 3D acceleration & effects.

Surf the Internet!

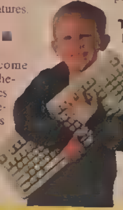
All systems come Internet ready with built-in Internet software so you can get up and running on the Internet the moment you turn on your new computer because every Envision PCs is pre-configured for the Internet. All you have to do is plug it in, log into you local Internet provider and you're ready to surf! Envision PCs include powerful Internet software like Internet Explorer.

Hundreds of Upgrades & Options

Don't settle for a standard system with no upgradability. At Envision, you have a ton of upgrade & option choices to choose from. Add Iomega's revolutionary new Zip Drive which lets you store 100MB on a disk or Epson's exciting PhotoPC digital camera which let's you take pictures and instantly see them on your PC. Whatever you want, we can get you. And we'll install it for you free of charge.

Ready for the Future

Your Envision system is ready to grow as you grow with lots of room for expansion and upgradability. Plus you won't have to spend extra money for proprietary upgrades because all Envision systems use standard components that you can find readily at almost any computer store around the world.



The Best Software Bundles

Envision gives you the best software bundles in the industry filled with stuff you want. When you choose one of Envision's Multimedia Systems, you get a complete reference library of a full volume reference titles like encyclopedia, dictionary, thesaurus, atlas, etc. Envision's PCs also come with a host of online software such as America Online. You can also choose as an option on any system the latest office suites from Novell, Lotus & Microsoft at super low special prices.

OVER $700 WORTH OF SOFTWARE INCLUDED

[illegible] & SUPPORT YOU CAN TRUST!

Envision also has some of the best service and support. At Envision we feel that it the most important factor in choosing a computer is not only the price [illegible] performance, but the place you buy it from. That's why our staff is dedicated to giving you the best service and support possible.

[illegible] LABOR/1 [illegible] PARTS FACTORY [illegible]

Envision backs every system up with a full 2 year labor/1 year parts warranty on all systems giving you the piece of mind to concentrate [illegible] more productive things. And should you have a problem, Envision's friendly and knowledgable technical staff [illegible] get you back up and running usually within 24 hours.

96 HOUR BURN-IN [illegible]

Each Envision systems [illegible] been thoroughly tested and burned-in for [illegible] hours. That's more than any other computer manufacturer and that ensures you the highest reliability and quality possible.

CUSTOMIZED CONFIGURATIONS

Envision has many different models [illegible] choose [illegible] but if you don't see the configuration that best suits your need, we would [illegible] happy to custom configure your system the way you want. Call for more details.

[illegible] UPGRADES INSTALLATION

We will gladly install [illegible] upgrades and options that you add [illegible] y[illegible] system at the time of purchase free of charge. That could save you hundreds of dollars [illegible] installation and labor charges. It's just [illegible] of Envision's many extra free services.

[illegible] 10 YEARS [illegible] THE INDUSTRY WITH 20,000+ [illegible] CUSTOMERS

Envision has been in the industry for over 10 years and during [illegible] time, [illegible] h[illegible] sold computers to over 20,000 customers. While other computer companies have [illegible] and gone, we have been right here serving the Southern California community and will continue [illegible] do [illegible].

We would like to thank all our customers f[illegible] Envision. All 20,000 of you.

If you're serious about getting on the Internet, why take a chance?

Have you noticed that it seems everyday somebody new decides to get into the Internet provider business? Question is, how long will they be around? Will they offer the services you need — today and tomorrow? Don't take chances. Check out DeltaNet. We are established, offer a complete array of Internet services, and our professional customer support that is unmatched in the industry. We're committed to exceeding your expectations. Ask around.

You'll find our customers everywhere because DeltaNet offers seamless coverage throughout Southern California. We have massive bandwidth capabilities on our robust, highly reliable network. We host more commercial Web sites than virtually any other provider in the country and offer competitive pricing. Best part is, we're available when you need us!

Don't gamble with other providers. And don't settle for the expensive and slow Internet access from AOL, Compuserve or Prodigy. Try us! You'll see why we have the most loyal customers around. DeltaNet will provide you with the fastest, most reliable and cost effective connection to the Internet. So if you're serious about getting on the Internet — call DeltaNet.

Connect to the Internet Today!

Call (800) DELTANET or (714) 778-0370 and talk to the Internet Experts at DeltaNet, Or sign-up on-line. It's easy

1) Dial the access # for your area
2) Log in as "guest"
3) Password is "newuser"
4) Follow the simple menus to sign up
5) You're ready to cruise the Internet

THE BOTTOM LINE

Web Publishing Made Easy – that's our bottom line. At Anawave Software, our goal is to make publishing a web site effortless for anyone and everyone. With our full-featured web hosting service you can publish your web page on the Internet, providing a fast and affordable link to the World Wide Web.

Starting at $19.95 per month, AnaServe™ Web Hosting is your low cost solution to eliminating the expense of having a dedicated computer and phone line, 24-hour Internet access and a system administrator. We offer digital T3 connectivity to the Internet, unlimited mail forwarding to the e-mail addresses of your choice, graphical web site traffic reports and a wide array of other powerful features. And best of all, AnaServe is easy to use!

ANAWAVE

continued from page 32

further design, do some prototyping, etc. ... I hope to have a Web site within the next few months. ... We want both ideas and funds from the public, and aim to widely encourage and support both. (Early donors are welcome to send financial encouragement to Clock Library, 3E Gate 5 Rd., Sausalito, CA 94965. We're a 501 c 3 nonprofit, and we'll send acknowledgement to donors, so they can subtract the gift from their income tax.) ... We'll be hiring [illegible] few staff in the next few months, including executive director. Applications are welcome, if people understand that response will be all too sketchy until we have some staff."

Mary Eisenhart

The Macintosh Web Site

Since we left the typewriters and X-acto knives behind some years ago, this magazine has been produced on Macs. When it became apparent that we were going to do a Web site almost two years ago, it seemed that many things would be a lot easier if the Web sites also ran on Macs, with the result that both our own Web server and that of our sibling, Music Universe, are Macintosh-based.

As we go to press, both *www.microtimes.com* and *www.musicuniverse.com* are running on PowerMac 7200/90s with 40MB of RAM—i.e. mid-range Apple hardware from about a year ago. For longer than we'd care to admit, *microtimes.com* [illegible] [illegible] [illegible] venerable IIfx, and while the hardware upgrade was welcomed by one and all, it's historically been the case that Net lag affected the reader experience more than the stalwart fx's limited throughput.

Our pages [illegible] fairly simple, our database searches relatively undemanding. For really high-volume traffic or specialized applications, there may or may not be a Mac-based solution. However, Apple offers considerably more hefty servers than we presently need, and if, like us, you have [illegible] lot of time and money invested in Mac using employees and Mac-format documents, it's worth checking out whether you can do the Internet or Intranet Web server you need without leaving the platform you love.

If you just bought your first Performa, setting [illegible] [illegible] maintaining a Web site is probably [illegible] than you want [illegible] take on right now. If, on the other hand, you're comfortable with basic word processor, database, and online skills, it's not too formidable a leap—especially if you've got more knowledgeable folks to call on when you're in over your head. If you know a little about UNIX, it comes in handy. But while it's possible to achieve amazing feats of multimedia complexity on your Web site, it's often counterproductive for your site's visitors; it's okay to start off with simple accessible pages that even text-only browsers can read properly.

Since the Web site's be up, we've found the following products especially useful:

•The server software, **WebStar** (Quarterdeck, *www.quarterdeck.com*), is relatively easy to set up, though getting [illegible] the various Internet plumbing to work properly in the initial setup requires more expertise than subsequent day-to-day operations. Day-to-day, it just works, running the site and serving the pages in trouble-free fashion.

•In mid-1995 when I joined the hordes of people picking up enough HTML from books and classes to put together simple pages, I couldn't find any HTML editing software that was significantly easier than just manually inserting tags into text files in word processors.

> •Being on a Mac, our server is relatively impervious to the nasty UNIX tricks to which other servers often fall prey. However, nobody's server is invulnerable and complacency is never a good idea. As we learned the hard way, nasty Mac tricks are out there too.
>
> —*Mary Eisenhart*

During this phase, my old favorites **MacWrite** (regrettably all but untouched by upgrades these several years) and **FileMaker Pro** (now in a new relational 3.0 version) (both from Claris, *www.claris.com*) proved valuable as ever. Their unusually graceful handling of mailmerge was a real boon when it came to such tasks as HTMLing long repetitious database files, for example, or causing Web page listings to appear with embedded links.

(Currently there's a new generation of page-creation software including Claris **HomePage**, Akimbo's **Globetrotter**, and Adobe's latest version of **PageMill**, and some of them are great drudgery-reducers. More about them [illegible] a future issue after we've spent more time with the software.)

FileMaker came in handy in another context—allowing visitors to access assorted databases and post information. Among the various promotional info that arrived with WebStar was a brochure for a product called **WebFM** (*www.macweb.com/webfm/*). This software allows the easy construction of scripts that [illegible] [illegible] a bridge between FileMaker databases and HTML pages on your Web site. (Again, this is an [illegible] where you might want to take the time to learn how to do this, or engage the services of an expert. In our case, the expert we engaged came from the dBASE world and was so smitten with some of FileMaker's more flexible qualities that he wound up doing quite a bit of WebFM work for clients.)

•Being on a Mac, our server is relatively impervious to the nasty UNIX tricks to which other servers often fall prey. However, nobody's server is invulnerable and complacency is never [illegible] good idea. As [illegible] learned the hard way, nasty Mac tricks are out there too.

Shortly after we moved the server from the IIfx to the 7200, [illegible] noticed that the performance improvement was not what we would like. Soon our visitors got to complaining about long load times.

Unfortunately, there was quite [illegible] bit of generic Net weirdness going on at the [illegible] time, so it [illegible] difficult to diagnose the problem. Things went on in this regrettable fashion for some weeks, until one day I [illegible] updating files and got a virus warning.

Running the latest version of **Disinfectant** (available for download in numerous locations) revealed that for months nVIR, [illegible] virus you never even hear about any more, had been having its way with [illegible] files.

Fortunately, after a certain amount of hair-tearing, the evil virus was eradicated and Disinfectant was installed on the server. It's been running much better ever since!

We were stupid. We were also lucky. Learn from our mistake.

Ed Kahn

Once again in 1996 we saw a maturing of the computer industry. Windows 95 has been so widely accepted in the PC compatible market

[illegible] 1996 InfoDial, Inc. InfoDial and Cashier are [illegible]

1996 WRITERS' SOAPBOX AWARDS

that it is virtually useless to talk about any other platform in terms of mass acceptance.

I am worried about Microsoft's overwhelming presence. In the word processor field, for example, they command about 85% of the market. There are other excellent and perhaps better products on the market, but the old rule of safety in numbers continues to force new users to go with the crowd. For myself, I still prefer the old **AmiPro,** even though Lotus (now a part of IBM) has abandoned this product in favor of its new WordPro. This product is completely new, rather than simply an upgrade of the older application.

The Internet has become such an important part of the computer marketplace that no system is complete without [illegible] good, fast modem. While communications remains one of the most mysterious facets of the high-tech world for me, new products are coming to market that make online communication faster and easier. Two modems caught my attention in the last year—one a fast 33.6Bps modem from **Zoom Technologies** that handles data and faxes superbly. While many modems will not run this fast, the Zoom modem automatically slows down to the fastest speed at which the modem [illegible] the other end of the line can operate. (Zoom, 800/631-3116)

The second modem I especially liked was the **Hayes Accura.** This beauty handles voice as well as fax and data. While it only operates up to 28.8Bps, it has the added feature of being a DSVD modem. What this means is that on a single phone line you can operate both a voice connection and data transmission simultaneously. This is really a boon for collaboration, since you can talk as well as type. (Hayes, 770/840-9200)

Computers are becoming faster and more powerful, and this is the trend that will continue for years. But what's amazing to me is that notebook computers are not far behind the full-size machines. This year, we have seen notebooks with powerful, fast processors, but we also see all the bells and whistles included in these small units. CD-ROM drives, as standard equipment or [illegible] add-ons, [illegible] becoming almost universal. One of the reasons for a CD-ROM these days is that software is increasingly being delivered on this medium.

Another widespread feature is infrared capability, which in the past year has become almost standard equipment for portables. This device lets you send and receive data without having [illegible] plug in cables between the portable and the other unit—either another computer or a printer. This [illegible] that keeping a portable and desktop in sync is easier than ever if you have [illegible] infrared port on the desktop machine. Strangely enough, I have seen no desktop units with infrared readers as standard equipment, but you can buy add-ons that do the job.

PCMCIA slots, now called PC slots, are now completely standard equipment on even low-end portables. This means that getting information in and out of the portable is much easi[illegible]. Modems, network cards, memory cards and now **Zoomed Video** cards are widely available

in standardized configurations that will work in virtually all of the machines. Zoomed Video lets you see video on your portable's screen with good visual quality and with CD quality sound. The card will fit into any PC Card slot, but will not work unless the machine is built to accept this card. If you work with video clips or CD-ROMs, you will want to check out this option on any new portable you buy. By next year, I assume it will be standard.

Notebooks have become so popular that the market is now being flooded with accessories designed specifically for the notebook user. Carrying cases, backpacks, hard drives, CD-ROM drives, SCSI cards .. the list goes on and on.

For the home or small business user, the single most important product to come out this year is a new version of **Visioneer's PaperPort** scanner (Visioneer 800/787-7007). The newest model comes built into a deluxe keyboard. I find myself using the scanner more and more the longer I have it on my system. It serves as a fax, copier and OCR that lets me turn scanned text into text in my word processor. Scraps of paper that used to clutter my desk are now scanned and placed in appropriate folders within the software that comes with the scanner.

Matthew Leeds

In my day job I manage a network. We've got a little of everything connected: Macs, Windows (3.1, 95, NT), various UNIX flavors (Solaris, BSDI, IRIX, AUX), a few of the medium-sized boxes (IBM AS/400 and RS/6000, HP/3000), some Ethernet switches, some routers, a few wide-area networks (dedicated T1 and frame relay), a connection to the Internet with all the stuff that implies (firewall, Web site, email, FTP), and assorted other goodies like network printers, fax servers, CD-ROM servers, modem pools, that sort of thing. As networks get larger, management and repair becomes an issue. There are a few goodies that we've come to use over the last few years that I feel every good network manager should have on hand.

A new product that we've been using lately is the **Harris LanMaster** (Harris Corp, Dracon Division, 805/987-9511). This is a non-invasive network monitoring device. By non-invasive I mean that it doesn't need a network connection to monitor your network. Normally, if you want to monitor traffic on a network, you need a physical connection to that network, i.e., on a 10BaseT network you plug into the network somewhere. With the LanMaster, you have a ring clamp with an opening that goes around a connected network cable, and via induction you can measure traffic on the network.

We got it to test network connections without disconnecting the connection. It's a way to see if a network problem is in software or hardware. It can measure traffic on a network segment, and log that traffic on an LED display. There's a version with a RS-232 port to dump

If Santa can go around the world in 1 night...so can you!!!!

data to a computer for graphing. It works with both Ethernet and TokenRing, UTP or coaxial cable, and runs on a couple AA batteries. We're still testing its accuracy, but so far [illegible] seems relatively accurate. Cost is under $1,000.

An old favorite that just got better is the **AG Group's EtherPeek**, version 3.0 (AG Group, 510/937-7900). This is far and away the best software-based Ethernet protocol analyzer available, happens to run on the Mac, and [illegible] worth getting a Mac if you don't already have one and need to monitor Ethernet networks (they make versions for TokenRing and LocalTalk as well)

A protocol analyzer is the only way to really "see" what's going on in a network. It lets you see inside the packets traversing the wire, pick them apart, follow "conversations," analyze traffic in various ways, watch for specific events, and solve those difficult technical problems that have everyone else throwing up their hands and swinging chickens over their heads.

AG Group also offers training materials for their products. We've used EtherPeek to monitor traffic on the network, find the nodes generating the most traffic, solve communication problems, and, recently, to assist in developing network aware products. Priced at just under $1,000, and worth every penny. They are also developing a Windows version which I expect will blow away the competition.

I've finally found a PDA I can use. It's **HP's 200LX**, of all things a DOS-based device, and an XT to boot. Small enough to fit in a shirt pocket, it includes an appointment manager, Rolodex/database, spreadsheet, telecomm program, memo writer, pocket Quicken, a calculator, and most importantly, an eighty-column display, serial port, and keyboard. Need to configure a router or hub and only have a serial port to talk to? Fire up this palmtop, hook up a serial cable, and you're talking. It's got a PCMCIA port, takes a modem or memory card, and there's a ton of available freeware/shareware that runs on DOS, including PPP clients, an HTML reader, pager software, etc.

It runs for a month on two AA batteries. Available in catalogs, office supply warehouses, and priced starting under $500. Small enough [illegible] keep with you all the time, unlike most laptops.

Take a look under your desk, the one with the computer on top. Bet you've got a power strip plugged in to the wall outlet. Makes sense—how often does someone put enough power outlets in the wall for all the devices you end up with on your desk? The same is sometimes true for networks as well. We often find that [illegible] need just one or two, or sometimes several additional Ethernet outlets [illegible] some location in our facility. Rather than pull more wire, we add a network power strip otherwise known as a mini-hub. Eight port Ethernet hubs have gotten very cheap, with some under $100. My favorite is from a company called **Allied Telesyn** (310/412-8684) Their CentreCOM hubs include both BNC and AUI ports, an uplink switch, and an integrated AC power supply (no wall wart transformer). They have a solid metal case and look like you could stand on them. We buy them from **Global Computer Supply**

> With the LanMaster, you have a ring clamp with an opening that goes around a connected network cable, and via induction you can measure traffic on the network.

(1-800-845-6225), a great source for lots of computer stuff at great prices. Call them and they will send you a catalog for life

Another great source for inexpensive network components is **Eagle Electronics** (1-800-992-3191) They carry the cable, connectors, test equipment and network components you'll need to build and support your own network, particularly if you're on a budget They have great prices on patch cords and offer them in a variety of colors. We use them to indicate what type of device is connected to the patch panel For example, connections from the "dirty" side of our firewall are made with red patch cords to alert network admins to be careful not to connect the clean and dirty sides of the network

Finally I'd like to put in a good word for the folks at **APS Technologies** (1-800-874-1341). They started as a supplier of hard drives to the Mac marketplace and have expanded to become a great source of much more. They carry software, printers, scanners, media, and a great pair of noise suppression headphones, the **NoiseBuster** ($70). They sample the sounds in your environment and actively cancel them out These headphones cut out the annoying background hum of your hard drive, the air conditioner, the fan on your computer, and other persistent background sounds They have a jack to let you pipe in music from your radio or CD player, and run on a nine volt battery. Great on airplanes, too.

Fred Lieberman

Mac Shareware is Alive and Well

A common complaint I hear from my Windows friends: "The Macintosh is cool, but there isn't any software." My purpose here is not to argue this cliche, since I haven't yet found a task I can't do with Mac software (though I haven't exactly gone searching for undoable tasks). Instead, I want to highlight some inexpensive and elegant tools available as shareware

One problem with shareware is that there's so much of it Each week brings dozens of new programs, often beginner's efforts which may work or crash with nonchalant randomness. Or you might find arcane programs which demonstrate principles of sub-atomic particle physics (guaranteed to work on high-end machines, but only six people in the world know what they're for). Every now and then, however, patience is rewarded with a gem that does something useful, does it well, remains stable under trying conditions, and is supported by the author as Apple evolves its Operating System

These programs are available from most BBSes and all Info-Mac mirror sites. None is crippled or flashes annoying "pay now" messages at you. They are either fully featured (Tex-Edit Plus) or hold back a few bells and whistles to encourage registration And at the prices asked ($20 for CalcWorks and CopyPaste, $10 for Tex-Edit Plus), it's hard to go wrong.

Doing It By the Numbers

Besides Apple's basic calculator, there must be hundreds of shareware and commercial calculators Having tried several dozen of these, my favorite remains **CalcWorks** by John Brochu The application takes 300K of RAM and is best kept active all the time; when it's not being used, it displays a discreet time and date window. This thoughtful feature eliminates the need for a menu-bar clock, reducing both menu-bar clutter and potential INIT conflicts.

The calculator can appear in several versions (and its elements are all user-configurable with custom colors and patterns). To avoid intimidating the kids, it can masquerade as Apple's basic calculator. With one click it turns into a full-function scientific calculator with optional permanent tape-record. It will operate [illegible] a traditional sequential calculator, an algebraic calculator, or as an RPN machine—your choice. It comes pre-configured with twenty-seven conversions for length, weight, volume, and other measures, and sixteen scientific constants from the speed of light to the mass of an electron; if registered, you can edit the Conversions and Constants menus to fit your own needs. A/V buffs will appreciate the ability to calculate in time units including frame rates for NTSC, & PAL/SECAM video as well as traditional film. (CalcWorks 1.5.0, *johnbrochu@aol.com*)

Improving Your Memories

Peter Hoerster's **CopyPaste** is a full-featured clipboard enhancer. The extension, which takes only 56K in the System Heap, provides ten separate clipboards, accessible [illegible] hierarchical items from the standard Mac Edit Menu. Once clipped, text or pictures can be manipulated with [illegible] set of tools before being pasted; the Tools menu [illegible] added at the bottom of the Edit Menu. I have not encountered applications that are bothered by these additions, but the "Troubleshooting" section of the online instruction manual explains why certain applications which handle clipboard functions in idiosyncratic ways can conflict with CopyPaste.

Another valuable feature is the ability to create ten "Clip Archives" —files to which you can paste and accumulate clippings continuously as you work. The most recent version of the program adds a floating palette allowing Copy and [illegible] operations directly, without invoking a menu. Hoerster originally wrote the program in order to have [illegible] convenient way of inserting a Baha'i date (a function still available), but the program [illegible] grown to be [illegible] useful and transparent that I wonder how I ever managed [illegible] work without it. (CopyPaste 3.2, *julian@sierra.net*)

Pleasures Of The Text

As the [illegible] implies, Tom Bender's **Tex-Edit Plus** is a text editor. Though it takes about twice as much space as Apple's "Simple Text," it offers [illegible] much richer feature set, and can be used for almost any writing task (such as this Soapbox) that doesn't require a full-featured word processor such as Microsoft Word or Nisus. It is fast, intuitive, and powerful.

Most important are the automated text-manipulating capabilities that allow painless clean-up of just about any formatting horror downloaded from the Web or other online service. Often equally important are reverse functions that strip Macintosh formatting (curly quotes, long dashes, accents, etc.) and replace them with plain vanilla ASCII, so that text can be uploaded or emailed without the embarrassing gremlins that show up if you forget these little niceties. Some of these problems can be handled automatically with the "Quick Modify" choices, but a much wider range of choices is available from the "Modify Document" dialog.

As might be expected from the author of "Eliza" and "Azile," the ever-popular do-it-yourself psychoanalysts, Tex-Edit Plus fully supports the Macintosh's text-to-speech features, and will read your prose aloud with moving highlighting (handy for proof-reading as well [illegible] an entertaining way to help beginning readers). You [illegible] also record and insert sounds into your documents. (Tex-Edit Plus 1.8.5, *tombb@aol.com*)

Woody Liswood

The Internet: The Death [illegible] Work? The Death [illegible] Freedom?

What has happened to work? You know, that thing we do every day so we can eat? If I believed what I hear, [illegible] one does any anymore.

What I hear continuously is Internet, Internet, Internet. The pundits say that Web browsers are the only software I need to do my work. Gobs and gaggles of information are available free on the Internet, so this [illegible] where I should spend my time.

What has happened [illegible] productivity software? You know, word processing, spreadsheeting, databasing and displaying? Now that the Internet [illegible] here, it seems that I'm supposed to stop writing, stop collecting and analyzing data, stop make presentations which I've created on the computer and [illegible] give up my spreadsheet for my old hand calculator and a good slide-rule. Why? Because the Internet is where it is at. Give me a break.

Don't lose sight of why microcomputers rule! We, you and I, [illegible] them to do work. To save time, money, energy, and free ourselves from the tyranny of the old MIS departments—or [illegible] least to escape from [illegible] paper-and-pencil world using hand calculators for analysis.

If I'm correct, the majority of work in your company is done on personal computers. Perhaps you transmit and publish some of that work over the Internet or even through your corporate intranet.

So, what percentage of your time do you spend doing productive stuff over the Internet? I'll bet it's in the low single digits. Maybe you spend hours and hours Web cruising. Great, but I wouldn't call that productive.

Remember the control freaks in MIS departments and their rationales for not giving people personal computers? I actually did [illegible] consulting assignment for one large San Francisco company where I interviewed everyone in [illegible] department so that I could recommend who should get a personal computer and who shouldn't. Why not give one to everybody, you might reasonably ask? That MIS director actually went so far as to tell me that he would not hire me if I even considered recommending an Apple.

Today, the MIS tyrants are jumping with glee. If they can sell you in Internet, Intranets, [illegible] connectivity, you are back in their control. They've won.

Beware, beware, beware.

Meanwhile, the most frequent question I receive from readers, clients, and my students is, "What should I use for my computing?"

I always tell them that I really must know what they want to do with their microcomputer before I can make any progress in recommending software or hardware. So, following is my current view of what works and what I use. Everything I mention exists [illegible] my system today, and helps me in my various roles.

Software

So, what is happening in the productivity wars?

Microsoft Office has [illegible] the war. Statistics say that Office has somewhat [illegible] 85% of the marketplace, at least for all the varieties of Windows. The Lotus Smart Suite, since being acquired by IBM, has [illegible] but disappeared from the marketplace. I see SmartSuite ads run from time to time, but I don't personally know of anyone buying their stuff and I do know of companies and individuals that continue to go

through the pain of switching from Lotus to Microsoft. Corel, after purchasing WordPerfect Office, is essentially giving it away with considerable other goodies on the CD-ROM, to entice you to stay with WordPerfect. Given the dismal percentage of the marketplace left to them, and since WordPerfect blew its chances in the Windows market a few years ago first by ignoring Windows, then by bringing out a rather buggy product, who knows if they will survive? My prediction is that they will slowly disappear, painfully, but with some DOS WordPerfect users still screaming that they'd rather fight than switch

Office95 changes the Suite wars (although I can't decide if Microsoft has upped the ante) and tries to prove I'm wrong about doing actual work on the Internet. With a browser interface to manipulate the suite software and built-in output to Web pages, maybe everything will be on the Web and we will finally have the paperless office. (Microsoft Corporation. One Microsoft Way, Redmond, WA 98052.)

I also like the suite of software which is published by Micrografx. If you need more graphics and control than PowerPoint or Freelance provide, you may find that **Picture Publisher** does what you need Also part of the package are Designer, Flow Charter, Snap Shot, and Media Manager After you get Microsoft Office, this might be your next purchase to round out your productivity software. (Micrografx, 1303 Arapaho, Richardson TX 75081 214/234-1769)

Business Plan Pro and **Marketing Plan Pro** are excellent ways for you to develop these important documents for your business. Each walks you through the process and provides questions for you to complete in doing the plans If you are in business, you need these programs as part of your library (Palo Alto Software 144 East 14th Ave, Eugene, OR 97401 503/683-6162)

Smartboard is a clipboard replacement I cannot live without It lets me put multiple [redacted] into the clipboard and then paste them where I want them when I need them. (Insight Software, P.O Box 354, Bountiful, UT 84011-0354 801/295-1890)

One of the most useful sets of productivity software is from **My Software**. My Professional Marketing Materials, My Deluxe [redacted] List, My Professional Business Cards, My Advanced Brochures, and My Advanced Label Designer are inexpensive but well-implemented solutions to keeping your business running. If you send anything to customers or clients, you really should have My Advanced Brochure. (MySoftware, 2197 East Bayshore Rd., Palo Alto, CA 94303-3219. 415/473-3600)

Norton Utilities [redacted] an absolute must. I prefer its Speed Disk to WIN95 defragger I protect everything with Norton Anti-Virus, which has found viruses on my students' floppy disks even before our network administrator realized that the system was infected. I also downloaded the free Norton Crash Guard. So far, no crashes in the few days I've used [redacted]. (Symantec, 10201 Torre Ave., Cupertino, CA 95014. 1-800-441-7234)

Quarterdeck's Clean Sweep monitors my disk for installations and keeps track of what happens. I use [redacted] to delete software, after I use the WIN95 Add/Remove programs. (Quarterdeck, 13160 Mindanao Way, 3rd Floor, Marina del Rey, CA 90292-9705. 310/309-3700)

I've always felt that the best way to upgrade software was to download it from CompuServe. Now it's the Internet Try **Oil Change** from CyberMedia It checks for what you have, then goes out and finds the upgrades and installs them Great stuff. (CyberMedia, 3000 Ocean Park Blvd., Ste. 2001, Santa Monica, CA 90405.)

I've always felt that **Emissary** was the best Web browser. But, with no upgrades out since spring, it has been eclipsed by **Microsoft Internet Explorer** and **Netscape** I keep both active, although I use and recommend Microsoft's product. For me, it has a better and easier-to-use mail feature than Netscape; also, I like its telnet client, and Netscape lacks one I telnet into the WELL, and find that Microsoft's telnet software works great while the other telnet stuff I've tried doesn't.

Clickbook is [redacted] must-have It works with your printer to turn out various-sized booklets and double-sided printing projects. Even with two-sided printing and booklet printing built into the NEC 860 software, Clickbook is much better, easier to use, and has significantly more options for your use (Clickbook, Bookmaker Corporation, 2470 [redacted] Camino Real, Palo Alto, CA 94306 415/354-8161)

Although all modems I've worked with come with some variety of voice, data, and fax software, **Delrina WinFax Pro** still gets my choice as the best of the fax software The Delrina product now comes alone or as part of their **CommSuite** If you need faxing, voice mail boxes, data communication, and Web browsers, Delrina does a good job, although I would still stick with Microsoft's Internet Explorer for my browser (Delrina, 6320 San Ignacio Ave., San Jose, CA 95119 1209 1-800-268-6082)

Every year I look at tax software **Turbo Tax** from Intuit always seems to be what I like. For this year, you will like their refund-/tax-owed monitor As you complete the forms, the monitor continually changes to show you the effects. Great for what-if analysis. In a similar vein, **Quicken** from Intuit and **Microsoft Money** are the two major players in the personal finance field. I've used both, and both work easily I stick with Quicken since it owns the market and integrates nicely into Turbo Tax. (Intuit, P.O Box 7850, Mountain View, CA 94039-7850 415/944-6000)

Since upgrading to Win95 I'm completely bummed on backup software I've got a Connors SCSI DAT tape drive connected I have tested every backup product I can find and haven't found any backup software that works with my setup. Everything worked perfectly, however, under Win3.1

For statistical work, **SPSS for Win95** is a clear winner I find that I can do almost everything I want, statistically, within Excel. But, for the serious statistics user, SPSS has it over everything else (SPSS, 444 N Michigan Ave Chicago, IL 60611. 312/329-2400)

A specialized part of statistics is conducting surveys I currently like **Snap** from Mercator software for creating and analyzing typical surveys such as you might do for marketing or personnel research. (Mercator, 176 State St. Newburyport, MA 01950. 508/463-4093)

Hardware

I used to use a parallel switch box to use both color and laser printers [redacted] the system Switch position "A" was my **HP LJ II** laser using a PostScript cartridge, still running after all these years; [redacted] **Epson Stylus** color printer on switch "B" for color reports and stuff, and a **Fargo** (Fargo Electronics, 1-800-327-4622) [redacted] transfer printer on switch "C" for when I needed overheads. Everything was slow, but reliable

I put in an **NEC** [redacted] laser printer—600 x 600 resolution—in place of my HP LJ II Great printer Really good output. But, to keep costs down (about $499 street price) all of the processing is done at the computer, not in the printer So I

1996 WRITERS' SOAPBOX AWARDS

get watermarks, booklet printing, a really primitive two-sided printing and I'm really happy—but, since it loads it own printer controller, I have to unload the software before I can get to the other printers. Not a big deal, but still a pain. (NEC, 1414 Massachusetts Ave., Boxborough, MA 01719-2298. 508/264-8000)

Now I add a new multi-everything **MultiPass C2500 Canon** color bubblejet fax, copier, scanner, printer into the system in place of the Stylus, which now goes to my 14-year-old for school work. What a great machine—I can print in color or black and white in the same printer with high-quality results for both modes. It faxes as [illegible] standalone fax machine or as a fax driver under Windows, and it works through a parallel port [illegible] I still have my serial port for my modem It produces good-looking output and I like the flexibility it offers as a copier—but it also does much of its calculations using WIN95, so it wants to load a driver. (Canon, 2995 Red Hill Ave., Costa Mesa, CA 92626. 1-800-423-2366.)

> So, what percentage of your time do you spend doing productive stuff over the Internet? I'll bet it's in the low single digits. Maybe you spend hours and hours Web cruising. Great, but I wouldn't call that productive.
>
> —*Woody Liswood*

Now conflict exists. Since I want to use the NEC and the Canon whenever I want, both drivers load. But If I don't have the Canon selected [illegible] the switch, the driver refuses to load. I boot up with the Canon selected on my switch box, then close the software driver for the printer I don't want to use this session. If I want it back, I have to reboot to get things working correctly. I'm not so certain that is progress.

I still highly recommend the **Vomax** series of external fax, data, voice modems. The Vomax costs a unmeasureable amount to run (in my house anyway), answers and stores faxes and voice internally, and lets me upload faxes to the computer for viewing and printing. The internal cards which do this also work, but then you must keep your computer on all the time. In my household that meant over $1 per day. That is a hefty price to pay for what the Vomax gives you for pennies or less. (Vomax, CLSI, *www.modems.com*)

I can't live without my label printer. I don't see much difference among all the models available; I use the **Avery Label Printer**. It co-exists with my external modem, since it also requires a serial port. If I want a label, I start it up, turn my serial switchbox switch to the printer, and print away. Great gadget and [illegible] significant productivity enhancer. (Avery, P.O. Box 5244, Diamond Bar, CA 91785-4000. 1-800-541-5507)

continued on [illegible] 166

Every year, thousands of kids turn this card into a diploma.

It's only a piece of paper but that little membership card has helped keep millions of kids off drugs, out of gangs and [illegible] school. To learn how [illegible] can help the Boys & Girls Clubs, call 1-800-854-Club.

1996 WRITERS' SOAPBOX AWARDS

continued from page 164

Douglas J. Nakakihara

It's the end of 1996, and still no "next generation" Amigas. Sigh.

After announcing my recent move away from Amiga-exclusive coverage, I braced myself for the "save the Amiga" campaign to kick in. Well, as it turns out, all of the email I received had "I feel the same way" sentiments.

Amiga? Still Here. (Not?)

Speaking of Amigas, the July issue of *AV Video & Multimedia Producer* magazine excluded the **Video Toaster Flyer** in their review of nonlinear-editing systems. The result was a rash of complaint letters from professional users. In the September issue, Bill Ferster defended this omission based on his belief that the Amiga was no longer being manufactured. Wrong!

I emailed a belated reply, letting them know that Quikpak was now making the machines and that they could also call TS Computers (818/760-4445), if they wanted to speak with a retailer. A few days later, my brother (*jamesn@vgn.com*), who works at TS, called me and said Mr. Ferster had actually phoned (Gawd, I love the Internet) to confirm my information. He wasn't a happy camper. (*AV Video & Multimedia Producer, avvmmp@kipi.com*)

When Am I Going To Learn? Alpha Vs. Intel

Being an Amiga user, I understand the downside of owning a non-mainstream computer. However, when I purchased my RISC-powered **DeskStation Raptor Reflex** (913/599-1900, *www.dti.com*), I figured I'd at least be quasi-mainstream since the OS was Windows NT. Well, this seems not to be the case and I'm having to continue to "defend" my computing choices. (I'm getting tired of this. Perhaps I should just get a Pentium Pro 200 and join the Intel crowd. Not!)

The **DEC Alpha RISC processor** is such a misunderstood beast and there are too many people spouting off half-truths—sometimes outright lies. A case in point: In a recent issue of *Windows* magazine, columnist John D. Ruley wrote an article with the basic message: "There is no reason to buy a RISC machine. Stick with Intel." Hogwash! It was obvious to me that the author got most of his information secondhand. Of course, everyone that reads the piece will assume he knows what he's talking about and dismiss RISC.

The fact of the matter is that the fastest Pentium Pro is no match for an Alpha. In real-world performance, it ain't even close. People can whine all they want about how expensive Alpha systems are and how cheap P6 systems are, and how you can't run this or that program on the Alpha, but when you've got a client and deadline breathing down your neck, that logic goes out the window. If you want real proof, try using an Alpha for a couple hours. Then try to

GET ALL THE INTERNET TRAINING YOU NEED AT 25% OFF THE PRICE.

The Internet. It's the most exciting and profitable progression in computing since the invention of the PC. But it's also evolving at an alarming rate.

To help you stay ahead, Prosoft is offering the Internet/Intranet courses you need to take advantage of the business and career opportunities the Internet is creating.

What's more, sign up for any of these Prosoft courses now and get 25% off the list price.

Whether you're looking for the latest MCSE NT 4.0 certification training, or want to develop corporate Internet/Intranet solutions and web sites, Prosoft has the instructor-led, hands-on courses you need.

Just call 1-888 PROSOFT and register before 1/1/97 for any of the courses below and you'll save 25% off the price.

•Basic Internet skills for Business.
•Basic and Advanced Web Authoring Using Microsoft Internet Explorer 3.0 or Netscape Navigator Gold 3.0.
•Microsoft Site Builder Boot Camp Levels 1, 2 & 3.
•Building Web Sites With Microsoft Front Page.
•Basic and Advanced JavaScript Programming Using Netscape Navigator Gold 3.0.
•Supporting Microsoft Internet Information Server.
•Supporting MS Windows NT Server 4.0 Enterprise Technologies.
•Supporting Microsoft Windows 95.
•Supporting MS Windows NT 4.0 Server.
•Building and Deploying Corporate Intranets.
•Supporting Microsoft Windows NT 4.0 Core Technologies.
•Internetworking Microsoft TCP/IP on MS Windows NT 3.5.

For a complete listing of courses and outlines visit us at WWW.PROSOFT.ORG

PROSOFT
The World's Internet Intranet Training Company

do the same stuff on the fastest Intel machine you can find It will make you cry. (Of course, with the 433MHz Alphas now shipping and 500MHz versions around the corner, I'm wondering when my 333MHz machine will seem slow.)

I'll concede that the Alpha is not for everyone. If all you do is spreadsheets, word processing, Internet browsing, and play games, go with the Intel flow. However, if you use your computer in a business, and that business relies heavily on an application compiled to run on [illegible] Alpha (e.g., LightWave 3D, SoftImage, Netscape, Internet Explorer, etc), you need to check out this technology.

In 1997, DEC will attempt to seriously challenge Intel [illegible] the CPU of choice. They know that compatibility and pricing are their Achilles' heel. However, Windows NT 4.0's greater compatibility with 16-bit apps and DEC's homegrown FX!32, an Intel 32-bit translation utility, should go a long way in making the Alpha a creditable CPU choice (FX!32, Digital Equipment Corporation, 1-800-DIGITAL, *www.service.digital.com/fx32*)

Moreover, DEC has already cut the price of its chips substantially I'd expect even greater cuts, if they realistically expect to threaten Intel sales.

I found that many 16-bit Intel-compiled applications already run quite well on my Alpha system under Windows NT 3.51. I've installed both Word and Excel for Windows and they seem to operate fine. I got my Netcom Internet software to work too. There are [illegible] few hitches here and there with various apps, but nothing I can't live with. I'm hoping that once I upgrade to NT 4 0, most or all of the glitches will go away. Actually, in many instances, it is only the installer program that has fits, which means you may have to first install the app on an Intel machine and then copy over the files. This can be tricky with DLLs, etc. being installed in the Windows directory.

Intel 32-bit executables will not run automatically under NT-Alpha Fortunately, DEC has released the final version of FX!32 which allows you to run many of these apps. Although it was specifically written for NT 4 0, I took the chance and loaded it up on my NT 3.51 machine. So far, it seems to work just fine. I believe that the few incompatibilities I've run into should be fixed when I move up to NT 4.0.

My reason for chancing the FX!32 installation is that I've had this copy of **Adobe Photoshop** (compiled for Intel CPUs) sitting underneath my desk gathering dust for months and I've been aching to install [illegible]. Well with FX!32 running, Photoshop installed and runs just fine. This is an incredible program! I've heard that the next release will feature batch processing something blatantly lacking currently I'm also hoping for multiple undo levels. (Adobe Systems Incorporated, 408/536-6000, *www.adobe.com*)

If you don't know, FX!32 initially runs an Intel-compiled app in interpreter mode, that is, computer instructions are converted to something the Alpha can understand on the fly As you might expect, this results [illegible] a performance hit, but only initially Little by little, FX!32 recompiles bits of executable code into native Alpha code, which [illegible] uses the next time you run the application So, the application gets faster as you [illegible] it. However, [illegible] in interpreter mode, Photoshop runs pretty darn fast. I'm really just happy [illegible] runs at all!

I am also running **Elastic Reality** (Avid Technology, 1-800-875-4699) but I had to install it [illegible] my Intel machine first. (The installation program checks for the type of CPU and will abort when it finds out your don't have an "Intel Inside.") There [illegible] some incompatibilities with creating and playing AVIs, but I'm hopeful that NT 4 0 will fix this. In any event, the main morphing functions of the program seem to work so at least there is basic functionality.

continued from page 170

NT: [illegible] 4.0 For [illegible]

I'm still hanging onto Windows NT 3.51 for now, until at least the first bug-fix release for NT 4.0. Sure, 4.0 has a lot of things I'd like to take advantage of, but I've heard reports about some driver anomalies. (Should be a short wait though, [illegible] the Service Pack upgrade is due out by the time you read this.) I've also hear rumors that it is slower and that 3.51 users are not flocking to upgrade.

OpenGL

Dynamic Pictures has released a new accelerated OpenGL video card called **Oxygen 102**. It ships with 8MB of RAM and supports resolutions up to 1600 [illegible] 1200 and 32-bit color. It appears to be a scaled-down version of their $4,000 V192 model, but lists for only around $1,500. However, a company representative told me that it will perform [illegible] well as the V192.

Although I haven't actually seen the Oxygen, if it has anything like V192-performance, it must be awesome. I demoed on a DeskStation Raptor Reflex at NAB with the V192 and was floored by its performance. It did 30fps full-color shaded LightWave preview animations! I paid about $700 for my Matrox Millennium after adding the extra video RAM and it doesn't have any OpenGL acceleration. I probably would have opted for an Oxygen, if it was available six months ago. Bummer. (Oxygen Dynamic Pictures, Inc., 888/3D-TURBO, *info@dypic.com*, *www.dypic.com*.)

Directory Utility

I just have to mention **Windows Commander**, the best directory utility program out there for the PC. I never even touch Explorer or File Manager anymore. It's probably my Amiga roots, but I just love this program. [illegible] uses a side-by-side window interface and allows you to perform your basic (and not-so-basic) file maintenance chores, as well as pattern-select files, globally change file attributes, compare directories, file search, change file ordering, configure button icons, and more. Plus it's got built-in ZIP, LHA, and ARJ archive capabilities. Moreover, archived files can be treated like directories, so you can "go into" archives and copy just the files you need. Right now, archiving [illegible] the only way to preserve long filenames between the Amiga and a PC when using removable media. (Incidentally, Consultron is reportedly working [illegible] supporting Win95 long filenames in their CrossDOS product. 313/459-7271.)

Another terrific feature is that it will show you the total size of [illegible] files in a particular directory. Windows Commander [illegible] a "must-have" and runs under Win95 and NT (Intel and Alpha compile). Get a shareware version from *www.shareware.com*. The registration fee is only $36. (The author lives in Switzerland, but thankfully still accepts US dollars.)

[illegible] that's about it. 1996 was [illegible] incredible and exciting year for me and 1997 looks [illegible] be even more eventful. Unfortunately, due [illegible] personal time constraints I will not [illegible] to contribute to *MicroTimes* on a consistent monthly basis anymore, but you'll still see my stuff here from time to time. Keep [illegible] lookout!

Kevin Savetz

1996 was a busy year in my home office. I replaced my aging **Mac IIci** (named Noodle) with a wickedly fast **Power Computing PowerTower** (dubbed Carnage.)

1996 WRITERS' SOAPBOX AWARDS

Although I would love to report that my choice of a Mac clone was without regret and the transition unremarkable, I cannot. The story starts and ends with the PowerTower 180, which arrived on the scene with a bad attitude, bad hard disk and bad motherboard. It took thirty calls to Power Computing, a new hard drive, two floppy drives, [illegible] replacement motherboard, two visits from the fix-it tech guy, and [illegible] month of impatient waiting before the computer worked as it should. The computer no longer has [illegible] bad attitude, but now I do. (To add insult to injury, the price of the PowerTower dropped by several hundred dollars a month after I received the machine. Power Computing promised me [illegible] credit for the difference, which I never received.)

Although this incident was exasperating, I might have written it off as a fluke—maybe I was just the unlucky recipient of a lemon. However, I've talked with several people who had startlingly similar experiences with their Power Computing computers. I've read nothing but great things about these machines in the press, but when it comes to actually delivering computers that work right out of the box, Power Computing has a long way to go.

Enough complaining. All is not gloomy, for my office has been graced by a variety of cool new doodads that you would enjoy finding in your possession this holiday season.

After Dark 4.0 from Berkeley Systems is the most fun you can have with your computer while you're not using it. AD4, which comes on one CD-ROM for Mac and Windows, is filled with a bevy of mind-blowing [illegible] screen savers. Berkeley Systems, home of the flying toaster, has mastered the art of groovy screen savers. Besides the fine array of beautiful, clever and sometimes hilarious displays, AD4 includes Internet delivery of news from *USA Today*, Ziff Davis, *Sports Illustrated* and other sources. (Unlike the most popular news-delivery screen saver, PointCast, After Dark does not require a full-time Internet connection.)

It may be hard to imagine a program that's so useful that you forget that you're using it, but that's the way it is with **Spell Catcher** from Casady and Greene software. This Mac-only control panel lurks in the background and politely beeps whenever you mis-type a word. It works with any program [illegible] all, from word processors to online tools [illegible] HTML editors. Since I started using it, I've given up [illegible] the spellchecker in Microsoft Word, and my emails have been uncharacteristically typo-free.

Finally, get yourself a copy of **24 Hours in Cyberspace**. This coffee-table book is [illegible] collection of the best photos taken on February 8, 1996 during the photodocumentary project of the same name. Sort of like *A Day in the Life of America*, but shot all across the world, the project focuses on how folks everywhere use the Internet and related technologies to better their lives. You don't need to be a geek, or even have a modem, to love the book, which is filled with beautiful photos of people, not computers. The included CD-ROM contains a complete archive of the 24 Hours in Cyberspace Web site (*www.cyber24.com*).

Birrell Walsh

A new year calls for predictions. Adjusting my prognosticator, I see three developments coming in the next year.

•Most obviously, 1997 will be the year of Maxwell's Daemon. By this time next year, everyone on the Internet will have personalizing agents of various sorts.

•In 1997, people will begin to pay for the privilege of isolation.

•In 1997, we may start seeing "things that go bump in the Net." Emergent phenomena [illegible] the Net, rather than content, will come to the fore. This is the most elusive of the coming year's possible events—and perhaps the most significant.

The Daemons Are Coming

"Daemon" is an ancient Greek word for a mysterious spirit. UNIX uses the term to refer to semi-intelligent programs that handle special tasks, such as the mailer daemon.

The renowned physicist James Maxwell revived [illegible] for [illegible] special thought experiment. Imagine two rooms of air, connected by a door. Why could not a wee creature ("Maxwell's Daemon") stand at the door, and sort passing air molecules? Any fast molecules would go into one room, any slow ones into the other. Pretty soon there will be one room that is full of hot [illegible] and one that has only cold air.

Maxwell noticed that [illegible] does not do this. We (the humans) do. And that is the big [illegible] on the Internet these days—sorting and filtering. Daemons [illegible] agents.

We are all awash in information, so much that we simply cannot sort it out. What can we do? The answer is that we can use computers for what they are good for—boring, tedious sorting. Many manufacturers have come up with variants of the same idea and have released early (as of this writing in mid-October, 1996) versions. They all circle around the same concept, though. Let a computer go find information and sort [illegible] for you, so you only get what you want.

You are doubtless already familiar with personalized news services like **My Yahoo** (*http://www.yahoo.com*) and **Mercury Mail** (*http://www.merc.com/*). My current favorite is **Excite** (*http://live.excite.com/*), which lets you create your own news topics for the Excite agent to track for you and report on every day from the magazines it "reads." You can find [illegible] excellent, though rapidly aging, summary of personalized online news services by New York University Professor Chris Harper at *http://pages.nyu.edu/~harperc/dailyme.html*.

Personalization of the Internet has gone far beyond news. **Firefly** (*http://www.ffly.com/*) has created an online community. At its heart is an agent that will keep a list of your interests. You [illegible] asked to rate films and music and advertisements. After about twenty ratings by you, Firefly's agent knows enough to begin making recommendations of other movies and music you might like. You can also meet people online who share your interests, as recorded in your profile and theirs. Firefly's daemon lives in their computer, to serve you when you visit.

Want your own daemon? And now that there [illegible] so many search engines, do you find you don't have time to look up your topic in them all? Quarterdeck (*http://www.quarterdeck.com*) [illegible] releasing a new version of its amazingly useful tool called **WebCompass**. It lives in your machine, not someone else's. [illegible] you do not have to trust the confidentiality of other companies. It will go to many different search engines and look up topics for you. Then it will visit the pages it discovers, and it will attempt [illegible] make summaries of those pages for you. It will keep all these summaries in a database, and will recheck the information [illegible] often [illegible] [illegible] wish. And it will do all these things reasonably fast. WebCompass is a major breakthrough.

NetAngel (*http://www.netangels.com*) [illegible] just releasing its first version in late 1996. Like Firefly, it builds [illegible] profile with your help by asking your to rate things. NetAngel asks you [illegible] rate every Web page you visit (Yes, you can turn [illegible] off so it doesn't know about those pages.) The NetAngel engine also sends you a daily Web page with sites you may be interested in.

You can keep track of daily developments in the daemon/agent business by subscribing to the Dreamwave mailing list. I have gotten much of my education in the field by reading the letters written to this list solely by people on the cutting edge—literally cutting: If anyone else maunders on, the listowner cuts them off. Send the command "subscribe dreamwave" to *majordomo@cybercom.net* .

The Privilege [illegible] Isolation

The problem with having access to everyone is that they have access to you. Movie stars discovered this long ago: When everyone has seen you, they all want to come talk.

1996 has seen a proliferation of "spam," which is Net-slang for unwanted mass-broadcast stuff. Junk email fills your mailbox. If you read newsgroups, you find them stuffed with junk postings.

In 1997, people will start charging you to prevent this. The first "email filters" are already on the market. I have yet to see a good one, but they should be along soon. They will examine your incoming mail. Any mail from people on the "welcome" list will go directly to your mailbox, perhaps prioritized by just how welcome they are. Mail from unknown sources will be machine-read to look for tell-tale phrases. If the phrases look good—say, the jargon of "engines" and "cabooses" if your hobby is model railroading—the mail goes in a "probably welcome" folder. If it seems to contain junk-mail phrases, it goes in the "probably unwelcome" folder for you to examine on rainy afternoons.

At least one product advertises it will send fist-waving letters to the people who have made it into your "I hate them!" folder. An online service could charge (and I would certainly pay) to pursue and denounce those who send unwanted junk mail. Robots yelling at robots—is there [illegible] TV movie in this?

A case could be made that this mail is harassment, forbidden under the CDA. If the Communications Decency Act survives the courts (God forbid), the silver lining may be that we will be able to bring suit against those who spam us. Any lawyers like to take this on? And don't forget my finder's fee, please.

Things That Go Bump In The Net

If you have not yet read Kevin Kelly's ***Out of Control***, may I recommend that you go get it? Reviewed in *MicroTimes* a while back, it is now available in paperback (Addison Wesley, $16.00). Kelly is the editor of *WIRED* Magazine and very, very articulate.

The basic idea I would like to mention, from among the many in his book about the convergence of mechanical and biological evolution, is the concept of "emergence." When systems get rich enough, they begin to interrelate in remarkable ways. Things begin to grow in the soup, and phenomena emerge that could not be predicted from examining the ingredients that went into the soup.

Another author, Stuart Kauffman, has for many years asked where complexity comes from. He won a MacArthur Fellowship for his inquiries because he got somewhere with the question. He says that complex structures will arise whenever a mix is both rich and diverse. The kind of structures that appear will be "self-catalyzing dissipative structures." That means

that their parts will be mutually encouraging (self-catalyzing—as the grass feeds the cow, and the cow manures the grass). They will also be "dissipative," in that they will be partially open systems that maintain their energetically-expensive existence by breaking down simpler structures and borrowing their energy. Again, like the cow/pasture system.

These emergent structures may be very short-term, like whirlwinds beside the road. They may last for a long time, like the Red Spot on Jupiter, a huge storm that has been going on for hundreds of years at least. And [illegible] a certain point of complexity, they are likely [illegible] become stable in a new way—by reproducing themselves.

Kauffman is clear that we cannot predict just *what* self-catalyzing structures will arise. We don't know if [illegible] will get sea urchins or sea lions. But something will arise in any rich, diverse, connected environment. "Life" is inevitable. You have to keep your eyes peeled to see it emerge—but it will.

This is controversial stuff, as Kauffman himself says in his accessible popularization *At Home in the Universe: The Search for the Laws of Self-Organization and Complexity* (Oxford paperback, $16.95).

Why talk about this in a computer magazine? Because the Internet is a "rich, diverse, interconnected environment," and it has gotten much more [illegible] [illegible] the last year or so. If Kauffman [illegible] right, "life" should be emerging very soon in the Internet. We [illegible] not talking about the content on the Internet, but large-scale phenomena arising [illegible] the flows back and forth.

Perhaps the first sign is "Net Weather," a term I have heard attributed to Netscape technology maven Marc Andreessen. It begins as the sort of traffic-report we all make about the Net—"Oh, it's slow today" or "Oops, guess the gremlins got that file." Well, the Net weather and the gremlins are the symptoms of the complexity and diversity which (Kauffman [illegible]) guarantee the emergence of.

Of what? That is where [illegible] [illegible] in, as phenomena-watchers on the Internet. If Kauffman is right, we should soon begin seeing large-scale self-stabilizing phenomena emerging [illegible] the Net. We will argue endlessly whether they are "really" life, but they will be life-like. The Prognosticator declares 1997 will be the year in which things start going "bump" [illegible] the Net. ■

Dual Pentium Pro Processor

- *EC Mid tower case with 250W power supply
- *Dual Processor Motherboard with Intel Intel 440 FX chipset
- *Dual Intel Pentium Pro Processor
- *256K external Pipeline Burst Cache
- *32 MB hi-speed EDO DRAM on board
- *1 44MB floppy disk drive
- *3.2 GB Enhanced IDE hard [illegible] drive
- *Diamond Stealth64 PCI SVGA with 4MB VRAM
- *MAG DX1795 17" non-interlaced SVGA monitor
- *Internal 12X speed CD-ROM drive
- *Sound Blaster 32 AWE PnP sound card
- *Digital Microphone
- *Stereo computer speakers with sub woofer
- *33.6 Internal FAX/Modem
- *Microsoft [illegible] Natural keyboard
- *Microsoft Serial Mouse
- *Microsoft Windows NT station 4 0 (CD)
- *Microsoft Family Pack

Pentium Pro 180 MHz	$3,998
Pentium Pro 200 MHz	$4,698.00

Ultra Media System

Dual Pentium Processor

- *EC Mid tower case with 230W power supply
- *Dual Processor Motherboard with Intel Triton HX chipset
- *256K external Pipeline Burst Cache
- *Dual Intel Pentium Processor
- *32 MB hi-speed EDO DRAM on board
- *1 44MB floppy disk drive
- *2.0 GB Enhanced IDE hard disk drive
- *Diamond Stealth64 PCI SVGA with 2MB VRAM
- *MAG DX1595 15" non-interlaced SVGA monitor
- *Internal 8X speed CD ROM drive
- *Sound Blaster 32 PnP sound card
- *Digital Microphone
- *Stereo Surround computer speakers
- *33.6 internal FAX/Modem
- *Keytronic 104 Win95 keyboard
- *Microsoft Serial Mouse
- *Microsoft Windows NT Station 4 0 (CD)
- *Best 10 CD Pack with 24 titles [illegible] Encyclopedia on 10 [illegible] whole lot more

Tracy Longo
Microtimes Magazine
801 E. Katella Ave., Suite 210
Anaheim, CA 92805

Dear Tracy

As a Philips CD-i [illegible]stributor we [illegible] not sure which are the best ways to introduce these MPEG movies to the computer [illegible]. We tried radio, TV, [illegible] other print media [illegible] found that Microtimes [illegible] for [illegible] than **seventy percent** of our sales volume.

Many people did [illegible] know that they [illegible] play these blockbuster movies on their computers with such fidelity and that they [illegible] share these VideoCDs with [illegible] many friends. You [illegible] Video CDs are almost [illegible] compatible [illegible] the audio CDs. VideoCD [illegible] [illegible] played back on MPEG PC, Mac, Amiga [illegible] TV-based machines like CD-i, 3D0, Sega Saturn, and Video CD players. Few PC users were confused between MPEG software (which [illegible] used to turn a normal SVGA card into [illegible] MPEG card) [illegible] dedicated hardware MPEG. Once they came to CD MOVIES+ stores [illegible] saw a 386 computer with a 2x CD-ROM using [illegible] $159 dedicated MPEG card playback movies **better** than their Pentium 166mhz equipped with 6x CD-ROM and a $400 top-of-the-line SVGA card [illegible] didn't have [illegible] explain the concept much further!

Microtimes' *Multimedia* [illegible] *Beyond* section [illegible] the perfect section for us to target [illegible] audience because this is where readers go [illegible] for the latest "bleeding" edge of technology. Some of the [illegible] casual readers of Microtimes wanted [illegible] [illegible] thank you for showing them [illegible] [illegible] good reasons [illegible] buy a computer.

Microtimes brought us so many customers that we had to stop running [illegible] ads for a couple months because [illegible] parking problems. Since [illegible] we've moved to a new bigger location with plenty of parking, but after being back in Microtimes for only one week, we have a new problem. So many customers [illegible] be in [illegible] store [illegible] one time, which [illegible] it hard for us [illegible] give each individual customer the attention that we would like to. To solve this we've increased [illegible] staff and opened [illegible] [illegible] in Southern California. We [illegible] part of this [illegible] [illegible] [illegible] and [illegible] magazine.

Tracy, we want to take this opportunity to thank you personally for going out of [illegible] way (sometimes you surprised [illegible] me) to help [illegible] meet [illegible] deadlines and making [illegible] that [illegible] ads [illegible] [illegible] right. Ready [illegible] help us go after Northern California?

Best Regards

Dean Ta, General Manager

P.S. Please tell [illegible] [illegible] they now can see [illegible] [illegible] CD Movies + MPEG cards at 5 locations: [illegible] Fernando Valley, LA South Bay, Hacienda Heights, La Habra, and Orange County.

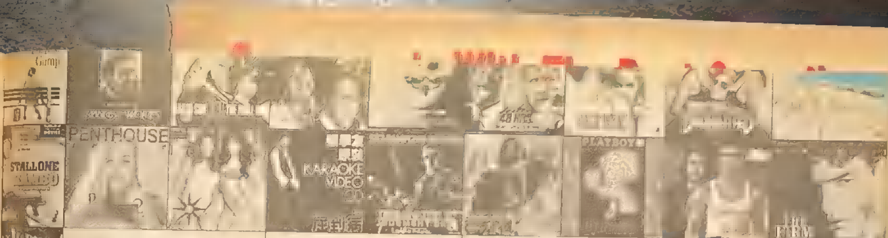
MICROTIMES



GOOD [illegible]

MPEG VGA [illegible]

- Matrox Millennium, Mystique, Diamond Stealth, Trident, ATI, STB, #9 Imagine 128-bit are not actual MPEG cards. They are accelerated graphic cards using either Compcore SoftPEG, Mediamatics or Xing MPEG software player to imitate an MPEG card. MPEG video quality will depend on memory, CPU and CD-ROM speed but will NEVER be as good as using an actual dedicated MPEG card

BETTER [illegible]

MPEG DAUGHTER CARDS

- Then there [illegible] hardware MPEG add-ons for graphic cards from Matrox, Diamond to enhance MPEG video quality. However they only work with certain models of video cards, expensive and don't have remote control [illegible] TV/VCR output options like our dedicated MPEG card. This may [illegible] your only option [illegible] there are no more ISA slots left in your computer and you also lose the memory upgrade slot for your video card

BEST MPEG Video Quality

DEDICATED [illegible] MPEG CARD	**$118.88**
DH MPEG CARD WITH TV/VCR OUTPUT	**$138.88**

- Dedicated Hardware Full Screen MPEG Card
- Standard 16-bit ISA Bus Connection. Fits VLB, EISA
- Autodetect & Play .mpg Files, VideoCD 2.0 and 1.1, old CD-i DV Movies (greenbook) [illegible] Karaoke VCDs
- 24-bit 16.7 Million True Colors VCR/TV Video Quality
- Playback Full Motion and Full Screen Video at 30fps
- Rewind, Forward, Slowmotion [illegible] Pause Digital Video
- Freeze, Capture & Save Video Frame as .bmp File
- Decode Layer I&II MPEG Audio at 16-bit CD-quality
- Work in DOS, Windows 3.1/3.11, and Windows 95
- No Jumpers For IRQ or I/O Address. Software Set
- Work in Conjunction with any VGA Card in Your PC
- Minimum 386, 486 Recommended [illegible] 2X CD-ROM

[illegible] or [illegible] your own MPEG [illegible] Player play all MPEG [illegible] Movies

		Superstores
NO IRQ FS TV TUNER	**$118**	**$140**
SCALABLE TV TUNER	**$168**	**$200**

- Full Screen ISA TV Tuner fits VLB, EISA
- Autoscan/Preview 181 Cable Channels
- Antenna, VCR/LD/Camcorder Inputs
- Million Colors Broadcast Video Quality
- Adjust Contrast, Bright, Tint, Saturation
- Adjust Volume/Balance/Bass Treb/Mute
- Display Clock, Channel, Both or None
- Work with any PC VGA/Video Card
- Scalable Tuner/Capture optional, then
- Capture [illegible] Video & Single-Frame .bmp
- Preview 16 TV Channels Simultaneously

INTRODUCING TRIDENT 9682 64-BIT SVGA, NEAR HARDWARE [illegible] & SCALABLE TV TUNER w/VCR INPUT [illegible] CAPTURE COMBO ALL ON 1 PCI CARD FOR ONLY $188

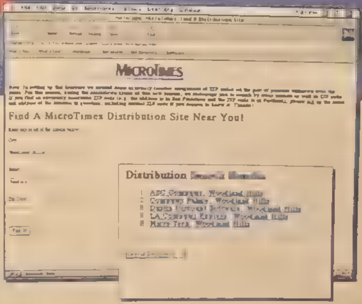
MICROTIMES on the WEB

What's New At **www.microtimes.com**



MicroTimes

Find A MicroTimes Distribution Site Near You!

Distribution

Site Finder: We're pleased to announce the debut of a Web-based service you've been clamoring for—a search engine to help you find a *MicroTimes* distribution location in your neighborhood. You can search by ZIP code, street name, and/or city to find a site that's convenient to you. Not only that, we provide the site's phone number so you can call them up and find out if *MicroTimes* is in stock before you make the special trip!

Greatest Hits: According to our most recent logs, the most popular activity [illegible] [illegible] site is visiting the home pages of [illegible] advertisers, which you [illegible] do by visiting the Great Mall (*www.microtimes com/greatmall.html*). The most-accessed story was our 1995 interview with Alvin Toffler, available at *www.microtimes.com/toffler.html* .

MicroTimes offices: 3470 Buskirk Ave., Pleasant Hill, CA 94523 (510) 934-3700 • 36 Harold Ave., #2, San Jose, CA 95117 (408) 244-4400
6767 Forest Lawn Dr., #110, Los Angeles, CA 90068 (213) 851-8600 • 801 E. Katella, #210, Anaheim, CA 92805 (714) 939-2809

http://www.west-tech.com
Areas of Specialty (and In-House Specialist): customized systems, Ronnie; hardware, Twan Ngo; Internet equipment, Phil William
Platforms Supported: Windows NT, Windows 3.X, Windows 95, MS-DOS, UNIX, Novell
Special Value-Added Services: Three-year labor warranty, lifetime technical support. With any system purchased, one year of free Internet.

Stanton

FASTER THAN **12 PENTIUMS!**

FAST!!! 686/P166+ $999

BLOWS AWAY PENTIUM 150 & P6!

THE WORLD'S FASTEST WINDOWS PROCESSOR!!!
Cyrix 686/100 is 45% faster in desktop publishing & 70% faster on raw CPU benchmark (speed200) than Pentium 133

faster than Pentium 60, 66, 75, 90, 100, 120, 133, 150, 166
faster than Pentium Pro 150
and both Pentium Overdrives,
and almost as fast Pentium 200
(just 4% slower than Pentium 200)
In better conditions (e.g. CPU benchmarks)
outperforms just about any Pentium!
THERE'S NADA, NICHTS, ZIP,
NOTHING OPTIMIZED FOR THE PENTIUM IN WINDOWS.

AY! CARAMBA!

BRUTAL FORCE!

CYRIX 686/P200+ $199

14% FASTER BUS!

686/P150 $349, P166 $379!

PENTIUM WAS INTRODUCED IN MARCH '93, IT TOOK ABOUT 50 ENGINEERS TO DESIGN IT, A TINY FRACTION COMPARING TO WINDOWS 95. (IT TAKES MORE ENGINEERS TO DESIGN SOME CAMERAS). PENTIUM IS AN OLD DESIGN, IF IT WAS A CAR, IT WOULD BE 15 YEARS OLD, WITH TONS OF MILES ON IT!

WARNING, STOP,
PENTIUM PRO DOES RUN
SLOWER THAN
REGULAR PENTIUM!

Tracy Longo
Microtimes Magazine
[illegible] Katella Ave., Suite 210
Anaheim, CA 92805

Dear Tracy,

As a Philips CD-i national distributor, [illegible] were [illegible] are [illegible] to introduce these MPEG movies to [illegible] computer market. We tried radio, TV and other print media, [illegible] found that Microtimes accounts for [illegible] than seventy percent of our sales volume.

Many people did [illegible] know that they can play [illegible] blockbuster [illegible] on their computers with such fidelity and that they can share these VideoCDs [illegible] many [illegible]. You see, Video CDs are almost as compatible [illegible] the audio CDs. VideoCD [illegible] played [illegible] on MPEG [illegible] Mac, Amiga and TV-based machines like CD-i, 3DO, Sega Saturn, and Video [illegible] players. Few PC users were confused between MPEG software (which is used to [illegible] a normal SVGA [illegible] MPEG card) and dedicated hardware MPEG. Once they [illegible] to CD MOVIES+ [illegible] saw a [illegible] computer with a 2x CD-ROM using our $159 dedicated MPEG card playback [illegible] better than [illegible] 166mhz equipped with 6x CD-ROM and a $400 top-of-the-line SVGA card [illegible] didn't have to explain the concept much further!

Microtimes' *Multimedia & Beyond* section was the perfect [illegible] as to target [illegible] audience because this is where readers go to for the [illegible] "bleeding" edge of technology. [illegible] of the [illegible] casual readers of Microtimes wanted [illegible] thank you for showing [illegible] so [illegible] good reasons to buy a computer.

Microtimes brought us [illegible] had to [illegible] running our [illegible] for a couple months because of parking problems. Since then we've moved to a new bigger [illegible] plenty of parking, but after being [illegible] in Microtimes for only [illegible] week, we have a new problem. So many customers can be in the store at [illegible] makes [illegible] us to give each individual [illegible] the attention that we would like to. To solve this we've increased [illegible] staff and opened [illegible] in Southern California. We owe part of this [illegible] you and your magazine.

Tracy, we want to [illegible] this opportunity to [illegible] you personally [illegible] out of your [illegible] (sometimes you surprised even me) to help us meet ad deadlines and making sure that our ads come out right. Ready [illegible] help us [illegible] after Northern California?

Best Regards,

Dean Ta, General Manager

P.S. Please tell everyone [illegible] they [illegible] and buy CD Movies+ MPEG [illegible] at 5 locations: [illegible] Fernando Valley, LA South Bay, Hacienda Heights, La Habra, and Orange County.

9430 WARNER AVE., STE M • FOUNTAIN VALLEY • CA 92708 • 714 378 3167 • FAX 714 378 3171

You get more for your dollar with MicroTimes.
Call us and find out how you too can be successful!

Los Angeles (213) 851-8600

ACADEMIC DEALS!

Students! Teachers!

Save up to 70% on your favorite software packages!

We are authorized for over 70 academic hardware and software manufacturers!

COREL Radius NCD MACROMEDIA SYMANTEC Microsoft Borland Adobe Lotus

What is "academically priced software"? "Academically priced software" is software specially discounted by the manufacturer designated to benefit students and school faculty. These software packages retain all of the features and functions of the regularly priced software packages. A college student or faculty I.D. is required to purchase these specially discounted products. For a complete listing of the academically priced software products we carry, visit our site on the world wide web at: www.r-tech.com

Mitsumi 104 Key Windows® 95 Compatible Keyboard

Mitsumi 12x CD-ROM Drives

When building systems for the long haul, you have to use components that are built to last. That's why we build our TOUCH systems (Touch P133MD pictured above) with Intel Pentium® Processors and Mitsumi peripherals. The Mitsumi ZW104 keyboard features a new ergonomic design, Windows 95 compatibility and 3 special keys dedicated to navigating in Windows 95. And Mitsumi 6X CD-ROM drives offer greater performance making games run better, video files play smoother and software installations finish faster. Mitsumi's volume production gives you consistent quality and superior performance at unmatched prices. This makes Supercom TOUCH systems some of the most reliable systems around. So if you're looking for systems that are built to last with components to match, call Supercom today at 1-800-888-1888 for reliable high performance computers.
